

THE CONCEPT OF THE MULTIVERS

Ψ -Theory: An Architectural Manifesto

A. M. Pleschev

Аннотация

This work presents a systematic exposition of the Ψ -Theory of the Multivers — a concept unifying physics, mathematics, metaphysics, and the theory of consciousness within a single ontology. The theory is founded on the postulate of the existence of a Single Universal Substrate (the Original), an infinite-dimensional continuum whose gauge projections constitute all observable universes. The key parameter is the scale-dependent dimensionality $D(r)$, which determines the observed laws of physics as a function of scale. Consciousness is regarded not as an epiphenomenon of matter, but as a fundamental property of the Substrate — a D-machine capable of locally altering dimensionality and influencing reality through Direct Access to the informational foundation of the world. The proposed concept offers a geometric explanation for the phenomena of dark matter and dark energy, a new interpretation of quantum nonlocality, and formulates the foundations of a projective science in which ethics functions as the physics of Symphysis.

The work consists of four main parts and seven supplements. The total volume is approximately 200 standard book pages.

Keywords: Ψ -Theory, Multivers, gauge projection, scale-dependent dimensionality, Symphysis, Nashtakh, Gophron Network, Direct Access, D-machine, Pleroma, Raster, Jism, Jasm, Jism, Catharsis, Psychophtora.

Structure of the Work

Part I. Fundamental Postulates and Categories

- 1.1. Fundamental Entities (Key Categories)
 - 1.1.1. The Single Universal Substrate (Original) / Protoformation
 - 1.1.2. Protoformation as Superposition of A and Ω
 - 1.1.3. Gauge Projection
 - 1.1.4. Wave of Reality
 - 1.1.5. Raster (Discrete)
 - 1.1.6. The Isotropic Ordering Axis (τ)
- 1.2. Subordinate Concepts
 - 1.2.1. The Initial Hypersurface
 - 1.2.2. Scale-Dependent Dimensionality $D(r)$
 - 1.2.3. The Inversion Sphere
 - 1.2.4. Multipersonality
 - 1.2.5. The Projection Operator
 - 1.2.6. Gophrons (G-objects)
 - 1.2.7. Symphysis (Φ)
 - 1.2.8. Nashtakh
 - 1.2.9. Pleroma
 - 1.2.10. Constants as Attributes of Ψ -Substrate
 - 1.2.11. Additional Geometric Concepts
 - 1.2.12. Concepts of Ψ -Dynamics

Part II. Fundamental Laws and Principles

- 2.1. Principle of Absolute Isotropy
- 2.2. Principle of Gauge Projection
- 2.3. Law of Scale-Dependent Dimensionality
- 2.4. Principle of Conformal Duality
- 2.5. Principle of the Nonzero Derivative (II-Principle)
- 2.6. The Role of Constants π and e as Attributes of Ψ -Substrate
- 2.7. Mechanism of the Phase Transition $0 \rightarrow 1$
- 2.8. Principle of Locality of Consciousness
- 2.9. Law of Ψ -Condensation
- 2.10. Thermodynamics of Ψ
- 2.11. Principle of Symphysis and Nashtakh
- 2.12. Law of Ψ -Phase Transitions of the Universe
- 2.13. Principle of Double Projection and Geometric Laws
- 2.14. Principles of Geometric Ontology

Part III. Consequences and Predictions

- 3.1. For Quantum Physics
- 3.2. For Cosmology and Gravity
- 3.3. For the Philosophy of Time
- 3.4. The Problem of Free Will and Predestination
- 3.5. The Phenomenon of Multipersonality

- 3.6. Souls as Fragments of Atman
- 3.7. Consciousness as a Fundamental Parameter
- 3.8. The Nature of Interventions and the Gophron Universe–Soul Connection
- 3.9. For the Theory of Knowledge
- 3.10. The Spectrum of Worlds as a Function of $D(r)$ and Symphysis
- 3.11. Refutation of the Inevitability of Heat Death
- 3.12. Resolution of Information Paradoxes
- 3.13. The Physical Basis of Cyclicity
- 3.14. The Criterion of «Life» and «Consciousness»
- 3.15. Predictions and Areas for Verification
- 3.16. Hypotheses on the Number of Ontological Qualities
- 3.17. Predictions for Specific Sciences
- 3.18. The Mechanism of «Switching» between Waves of Reality

Part IV. Models and Conclusion

- 4.1. A Brief Model of the Ψ -Cycle
- 4.2. The Complete Model of the Protoformation Cycle
- 4.3. The Final Model of the Multivers
- 4.4. The Final Logic of the Concept
- 4.5. The Key New Equation
- 4.6. Methodological Conclusion
- 4.7. The Epistemological Imperative
- 4.8. New Methodology: D-Mapping of Reality
- 4.9. Manifesto of Projective Science
- 4.10. The Ethics of Symphysis
- 4.11. Final Conclusion: From Occam’s Razor to the Gophron Universe

Supplements

- S.1. Prima: Consciousness, Symphysis, Alchemy, and Ψ -Field Dynamics
- S.2. Secunda: The World of Yama — Ψ -Ontology of Nav
- S.3. Tertia: On Glooms, Sprites, and the Method of Conscious Collapse of Potential Branches of Reality
- S.4. Quarta: Ψ -Programming — Architecture of the D-Machine
- S.5. Quinta: The Triad of Advanced Symphysis
- S.6. Sexta: Ψ -Biochemistry and Alchemical Transmission
- S.7. Septima: Ψ -Evolution of Protein and the Ninth Shell of Man

Introduction

0.1. The Author's Conception and Methodology

This work is not an attempt to describe reality, but an attempt to change the very optics through which we view it.

The author proceeds from the premise that modern science has reached the limits of its descriptive capacity. We have created the Standard Model, General Relativity, and Quantum Mechanics — and discovered that they contradict one another, while their joints gape with «dark» entities introduced to salvage the equations. Dark matter and dark energy are not discoveries, but symptoms of crisis.

The Ψ -Theory (Theory of the Multivers) proposed here is a radical step. It postulates: we do not see the essence of things; we see only their **Rasters** — coarse-grained projections of a multidimensional Original onto our low-dimensional brane. All of physics is the science of projection artifacts, not of fundamental reality.

The author's methodology is neither academic nor artistic. It is **constructive metaphysics**: a synthesis of mathematical models (L(p)-metrics, the D(r)-function), physical principles (holography, gauge projection), and philosophical intuition refracted through the prism of traditional teachings on consciousness. The result is not a proof, but an **architectural manifesto of a new ontology**, where Consciousness is not an epiphenomenon of matter, but a fundamental property of the Substrate, and ethics is not morality, but geometry.

The aim of this work is not to convince, but to provide a map and compass for independent movement from Raster to Original.

0.2. Ψ -Glossary (Brief Lexicon)

For instant orientation in the text.

Anamorphing — projection into a higher dimensionality with expansion of angles.

Catharsis — Ψ -purification through an act of Sacrifice, leading to the growth of Symphysis.

Catamorphing — projection into a lower dimensionality with contraction of angles.

Direct Access — the ability of Consciousness to directly influence Ψ -programs of the Gophron Network.

D-machine — a model of Consciousness as an operator capable of locally altering dimensionality.

$D(r)$ — scale-dependent dimensionality, the key parameter of the theory.

Gloom — a local decrease in $D(r)$, the «metric shadow of Nashtakh».

Gophrons (G-objects) — elementary units of structured Ψ -substrate at the Planck level.

Gophron Network — the discrete, fractal foundation of Space-Time.

GU (Gophron Universe) — the limiting state of «thinking space-time».

Inversion Sphere — a model of a local Wave of Reality with «center-infinity» duality.

Jasm — the emotional-energetic context of the D-machine (Ψ -field gradient).

Jism — the light material-field substrate of Consciousness (Shen).

Jusm — service Ψ -upgrade programs received from the Gophron Network.

Multipersonality — the totality of all replicants of a given psychophysical pattern.

Nashtakh — the process of decay, fragmentation, opposite to Symphysis.

Nav — a boundary Ψ -region between the 3D-World and Pleroma.

Original — the infinite-dimensional Single Substrate of all being.

Pleroma — the state of Fullness, the unity of all ontological qualities.

Psychophthora — Ψ -corruption through parasitism, the antagonist of Catharsis.

Raster (Discrete) — an elementary observed object as a coarse-grained shadow of the Original.

SEP- Ψ (Semenogelin- Ψ -Complex) — the material substrate of Jism.

Sprite — a local increase in $D(r)$, the «metric trace of Pleroma».

Strazh-Controller — the Ψ -interface of the D-machine, filtering Direct Access.

Symphysis (Φ) — the measure of conjugation, the internal unity of Pleroma.

Wave of Reality — a concrete 3D+1 realization of the Original (a moment of the Present).

Φ (Symphysis) — the measure of connectivity, the key ontological parameter.

0.3. Rules of Reading («Safety Instructions»)

This text demands of the reader not erudition, but **a readiness for a paradigm shift**. If you seek confirmation of known theories or expect conventional academic discourse — you will be disappointed.

Here:

- Terms are introduced not gradually, but at once, as elements of a holistic architecture.
- Physics, mathematics, philosophy, ethics, and the metaphysics of consciousness speak a single language — the language of Ψ -ontology.
- What is required of you is not agreement, but **active co-thinking**: the ability to temporarily accept the author's axioms in order to see the picture that opens up.

This is not a text for passive reading. It is a trainer for the D-machine.

0.4. A Note on Limitations

The present work is **not a completed academic treatise**. It is an «**Architectural Manifesto**» or « **Ψ -Synopsis**» — a condensed, thesis-style exposition of the load-bearing structures of a new ontology.

What you will find here:

- A system of postulates, principles, and consequences.
- Mathematical sketches and geometric models.
- Speculative predictions and directions for inquiry.

What you will *not* find:

- Rigorous mathematical proofs.

- Experimental data and their statistical analysis.
- A historiographical survey and references to literature.

This is a map. Not the territory itself, but a tool for orienting oneself within it. Elaboration and verification are tasks for the future.

1. Part I. Fundamental Postulates and Categories

1.1. Fundamental Entities (Key Categories)

1.1.1. The Single Universal Substrate (Original) / Protoformation

An infinite-dimensional continuum of Space-Time-Energy-Information, lying at the foundation of all being. In later materials, this is refined as **Protoformation** — the undivided state of the Ψ -Substrate prior to Planck-scale differentiation, a deeply corrugated continuum with infinite informational capacity. Corrugation is not a property, but the very essence of its potentiality. Philosophical analogies: Plato's «World of Ideas», Kant's «Thing-in-Itself», the «Absolute» in idealism, Tegmark's mathematical multiverse.

1.1.2. Protoformation as a Superposition of A and Ω

Protoformation = $A \otimes \Omega$, where:

- A (Alpha) — the aspect of «Pattern / Structure / Relation».
- Ω (Omega) — the aspect of «Potential / Flux / Becoming».

These are two entangled pairs of projections:

- (I, Π) — «Static Framework»: Information (logic, structure) and Space (arena, geometry of this logic).
- (E, B) — «Dynamic Flux»: Energy (potential for change) and Time (arrow, parameter of realization of this potential).

Scientific parallels:

- Connection (I, Π) : The Holographic Principle, AdS/CFT correspondence — information and space are dual.
- Connection (E, B) : Canonical conjugacy in quantum mechanics ($\Delta E \Delta t \geq \hbar/2$), the interpretation of antiparticles as motion backward in time.

1.1.3. Gauge Projection

A fundamental process/relation that generates observable worlds from the Original through the reduction of dimensionality and degrees of freedom. Any observable universe is a low-dimensional gauge projection of the infinite-dimensional Original. Projection is not a spatial mapping, but a reduction of degrees of freedom and dimensionality.

1.1.4. Wave of Reality (formerly: Quantized Hypersurface of the Present, QHP)

A holistic and immutable «moment of the Present» — a concrete $3D+1$ (or other dimensionality) realization (projection) of the Original. Physical image: not a «time arrow», but a «graph with nodes», where each node is a complete state of the Universe at moment t_i . The edges of the graph reflect relations of «similarity» or «causal possibility» (not causality in the classical sense). Connection with existing theories: analogy with the «sum over histories» in path integrals (Feynman), but in the configuration space of the entire Universe. Connection with the concept of the «Tensor Network» in quantum gravity.

1.1.5. Raster (Discrete)

An elementary observable object (particle, field excitation) as a coarse-grained, pixelated shadow of a multidimensional structure of the Original. The elementary particles of the Standard Model (electrons, quarks) are not fundamental objects, but coarse-grained raster projections of complex multidimensional structures of the Original. Their small set of quantum numbers are the «pixels» accessible to our 3D+1 perception. The true nature of particles is multidimensional and geometrically rich, but in our projection, it is discretized and simplified.

1.1.6. The Isotropic Ordering Axis (τ)

A parameter that orders the Waves of Reality, devoid of any physical distinction between the «past/future» directions. At the level of the set of QHPs, there is no distinguished direction of «past $\rightarrow$ future». There exists only an ordering parameter τ , along which QHPs can be arranged.

1.2. Subordinate Concepts

1.2.1. The Initial Hypersurface (IH)

The Wave of Reality in which the «here and now» of a concrete observer is localized. The observer (a system possessing consciousness and memory) is inevitably «locked» within one concrete Wave of Reality.

1.2.2. Scale-Dependent Dimensionality $D(r)$

The effective (fractal) dimensionality of space as a function of the scale of observation. The key parameter of the theory. The dimensionality of space is not a constant (not 3), but a function of the scale of observation r .

1.2.3. The Inversion Sphere

A topologico-metric model of a local Wave of Reality, where the «center» and «infinity» are dual, conformally connected states. Motion toward the «center» (the conventional microcosm) leads to a phase transition and geometric turning inside-out into a dual configuration.

1.2.4. Multipersonality

The totality of all «replicants» — versions of a given psychophysical pattern across all Waves of Reality. Death in the Initial Hypersurface is not an ontological annihilation, since other replicants exist.

1.2.5. The Projection Operator (P)

A hypothetical mathematical operator that performs the transition:

$$P(\text{Original}) \rightarrow \{\text{Wave_of_Reality}\}.$$

1.2.6. Gophrons (G-objects)

Elementary units of structured Ψ -substrate at the Planck/sub-Planck level. Geometric patterns (degenerate spheres, Platonic solids, fractal knots) in the very fabric of space-time, capable of

storing information through their topology and storing energy in the form of elastic tension of geometry.

Classification of G-objects:

- **G-0:** Pointlike objects of Planck scale («hedgehogs», «saddles», «webs»). Carriers of virtual information and geometric tension.
- **G-1:** Critical objects at the boundary of stability. Possibly correspond to elementary particles as excited states of the gophron network.
- **G-Δ:** Macroscopic structures (stars, black holes, living organisms) — coherent ensembles of gophrons.

Properties: Capable of nonlocal connections through the imaginary component of their geometry (existence in $\mathbb{C}$ -space), explaining quantum entanglement.

1.2.7. Symphysis (Φ)

A measure of the conjugation, the internal unity of Pleroma in a given reality. Two levels:

- **True Symphysis** $\Phi_{\text{true}}(n)$ — the absolute measure of connectivity of ontological qualities in a world. Grows from 0 in Hell to ∞ in Pleroma.
- **Optimal Symphysis** $\Phi_{\text{opt}}(n) = 1$ — the reference calibration of each world, corresponding to its n -dimensional octahedron. In our 3D-world, $\Phi_{\text{opt}} = 1$.

1.2.8. Nashtakh

The process opposite to Symphysis: stratification, destruction, fragmentation. A decrease in connectivity, growth in the number of ontological qualities, tightening of laws-restrictions.

1.2.9. Pleroma

From Greek $\pi\lambda\eta\rho\omega\mu\alpha$ — «fullness», «repletion». A single entity which, in our projection ($D \approx 3$), disintegrates into separate «hypostases»: mass, energy, field, information, space-time, consciousness. As D grows (movement toward the Source), the number of categories tends to 1. As D collapses (movement toward Hell), the number of categories tends to infinity, and the laws-restrictions between them become ever more rigid.

1.2.10. Constants as Attributes of Ψ -Substrate

- π — symbol of cyclicity, of closure upon oneself, of eternal return. It is «the memory of the whole» at every point. The informational program of folding.
- e — symbol of continuous becoming, of self-identical growth. It is the «mechanism of transition» between the imaginary and the actual, between potentiality and manifestation. The energetic operator of unfolding.

1.2.11. Additional Geometric Concepts

- **Coefficient of Metric Deformation** $\lambda_n = (\pi/2) / \arccos(x_n)$ — the ratio of arc length in our world to arc length in world n for the same cosine.
- **Angle of Symphysis** $\theta_n = \arccos(x_n)$ — the angle between axes to the vertices of the reference body of world n .
- **Anamorphing** — projection from below upward (from lower to higher dimensionality), expansion of angles to 90° and generation of new structures.

- **Catamorphing** — projection from above downward (from higher to lower dimensionality), contraction of angles from 90° and reduction of structures.
- **Stereointerference** — the emergence of a Platonic solid at the intersection of a convex and a concave n -sphere.
- **$L(p)$ -metric** — a metric of the form $\sum |x_i|^p = 1$, where $p = 1$: reference body (n -octahedron); $p = 2$: convex n -sphere; $p = p_0 \approx 0.5646$: concave n -sphere (first Utgard constant).
- **Utgard Constant** p_0 — a universal number defining the concave metric, complementary to the reference one.
- **Stasis-points (vertices)** — fixed points of interference, maximum of Symphysis in the body.
- **Tonus-lines (edges)** — lines of tension.
- **Choresis-regions (faces)** — regions of maximum mobility, potentiality.

1.2.12. Concepts of Ψ -Dynamics

- **The Information Cone Problem (ICP)** — a fundamental limitation: in any unfolding system, it is impossible to simultaneously maximize coverage (volume of information) and resolution (depth/quality of its processing).
- **The Utgard Principle** — any integral, discrete (Pythagorean) can be completed to fullness by the transcendental (the Utgard Point). The main code of the Universe — realized «Pythagorean» structures. The black code — transcendental potential, the source of novelty.
- **The Gophron Computer / Universe (GU)** — the limiting state of a system, when all its energy is transformed into a maximally complex gophron structure of space-time, possessing properties of a computational medium and potential consciousness.

2. Part II. Fundamental Laws and Principles

2.1. Principle of Absolute Isotropy

At the level of the Original (Protoformation), there exist no distinguished directions in time, space, or scale (the «micro» and «macro» are dual).

Triple Isotropy:

1. **Isotropy of Time:** There is no distinguished «past-future» direction at the level of the Original.
2. **Isotropy of Space:** There are no distinguished points or directions at the level of the Original.
3. **Isotropy of Scale (the most radical):** There is no fundamental distinction between «micro» and «macro». These are dual, conformally connected states.

This completes the Copernican program: humanity is at the center of neither the cosmos nor the dimensional hierarchy.

2.2. Principle of Gauge Projection

All observable physical reality is a low-dimensional, informationally coarse-grained projection of the Single Substrate.

Mechanism: Any observable universe (including our «Wave of Reality») is a gauge projection of the infinite-dimensional Original. Projection is not a spatial mapping, but a reduction of degrees of freedom and dimensionality.

Corollary — «Rasters» (Discretes) of Particles: The elementary particles of the Standard Model (electrons, quarks) are not fundamental objects, but coarse-grained raster projections of complex multidimensional structures of the Original. Their small set of quantum numbers are the «pixels» accessible to our 3D+1 perception. The true nature of particles is multidimensional and geometrically rich, but in our projection, it is discretized and simplified.

Hierarchy of Projections and the Diversity of Worlds:

- **Multivers as a Spectrum of Projections:** Different «Waves of Reality» are not independent universes, but different regimes or «angles» of gauge projection of one and the same Original.
- **The Possibility of Other Dimensionalities:** Projections may generate worlds with any integer (or even fractional) spatial dimensionality (1D, 2D, 4D, etc.), but our cognitive and measurement apparatus is tuned to 3D+1.

2.3. Law of Scale-Dependent Dimensionality ($D(r)$ -Law)

The effective dimensionality of space D is a continuous (or piecewise continuous) function of the scale of observation r :

$$D = D(r).$$

Behavior of $D(r)$ at various scales:

- At $r \sim \ell_{\text{Planck}}$: $D(r) \rightarrow \infty$ (or a large number). We approach the fullness of the Original, but our projection yields only the simplest «Rasters».
- At $r \sim$ human/planetary scales: $D(r) \approx 3$. The Euclidean physics of Newton-Einstein is reproduced.
- At $r \sim$ galactic/cosmological scales: $D(r) < 3$ (2.7...1). Space becomes effectively low-dimensional.

Main Corollary — Modification of Gravity: The Newton/Einstein law is generalized:

- Potential $\Phi \sim 1/r^{D(r)-2}$.
- For $D = 3$: classical law $\sim 1/r$.
- For $D \approx 2$: potential $\sim \ln(r)$, force $\sim 1/r$.
- For $D \approx 1$: potential $\sim r$, force $\sim \text{const}$.

Explanation of Astronomical Anomalies: The constant rotational velocity of stars at the outskirts of galaxies (rotation curves) naturally follows from $D(r) \rightarrow 2$ at large scales. This offers a geometric alternative to the dark matter hypothesis. Similarly, the accelerated expansion of the Universe may be a consequence of the change in $D(r)$ at super-large scales.

2.4. Principle of Conformal Duality (Principle of the Inversion Sphere)

The space-time of a Wave of Reality is closed and non-singular; motion toward the «center» (the conventional microcosm) leads to a phase transition and geometric turning inside-out into a dual configuration.

Model of the «Closed Inversion Sphere»: Our local space-time projection possesses a topology of a sphere of a special kind. Motion toward its center (conventionally, into the microcosm) does not lead to a singularity, but triggers a phase transition — a turning inside-out. In this process, our world becomes the «center» of a new, dual space-time sphere.

Geometric Analogy ($L(p)$ -transformation): Like a line segment and a semicircle metrically transitioning into one another as the scale of observation changes. This demonstrates the conformal duality between the «large» and the «small», eliminating the absolute hierarchy of scales.

2.5. Principle of the Nonzero Derivative (Π -Principle)

At the foundation of all existence lies the Single Universal Substrate (Original), which, in the limit of self-compression, can be described as a point of singularity — the Super-Zero. However, this Super-Zero differs in principle from the arithmetic zero.

Mathematical Formulation: If any manifested reality is represented as a function $F(\tau)$ of the ordering parameter τ , then at the point of maximal convolution ($\tau = 0$), the following holds:

$$F(0) = 0 \quad (\text{Absolute Rest, Unmanifestedness}),$$

$$F'(0) = \pi/2 \quad (\text{Memory of Atman, Impulse toward Manifestation}).$$

The derivative at zero is not equal to zero. This is a fundamental property of the Original: it cannot abide in absolute rest, for it stores within itself the «memory» of its infinite nature. The number $\pi/2$ appears here not as an accidental constant, but as a symbol of the connection between the finite (diameter, unit) and the infinite (circumference, cycle), as well as the first derivative of the function $\sin(\pi/2 \cdot \tau)$ at zero.

Physical Interpretation: The Π -Principle asserts: at the foundation of being lies not statics, but an eternal impulse. The Super-Zero is not a point of absolute end, but a point of maximum potential tension, the «cocked spring» of reality. The very structure of the Original is such that it must manifest, must unfold into a sequence of Waves of Reality. This principle resolves the classical problem of the «first push»: no external push is required, for the push is an internal property of the Original, its nonzero derivative.

2.6. The Role of Constants π and e as Attributes of Ψ -Substrate

The two fundamental constants appear in the Π -Principle not accidentally, but as necessary attributes of the Absolute's self-consciousness:

- π — symbol of cyclicity, of closure upon oneself, of eternal return. It is «the memory of the whole» at every point. In terms of Ψ -Theory: π is the informational program of folding.
- e — symbol of continuous becoming, of self-identical growth. It is the mechanism of transition from the imaginary (unmanifested) to the actual (manifested). In terms of Ψ -Theory: e is the energetic operator of unfolding.

Their connection is given by the formula of the Absolute's self-reference:

$$-\ln(i^i) = \pi/2,$$

where i is the symbol of imaginarity (unmanifested potential). The act of «the Absolute's glance upon itself» (i^i) through the mechanism e generates the first quantum of manifested reality ($e^{-\pi/2}$), and the logarithmic return to the source yields the measure of this act — $\pi/2$.

2.7. Mechanism of the Phase Transition $0 \rightarrow 1$ (The Act of Self-Reference)

The transition from Phase 0 (Gophron/Dormant Potential) to Phase 1 (Inflation) is described not as a vague «fluctuation», but as the actualization of the derivative:

1. **Phase 0:** $\Psi(0) = 0$. But $\Psi'(0) = \pi/2$. Within the gophron is «folded» information about the entire future trajectory (as in a seed).
2. **Act of Self-Reflection:** The gophron (pure geometry) «looks at itself». In mathematics, this is the operation i^i , where i is the symbol of the imaginarity (unmanifestedness) of the gophron.
3. **Birth of Energy (e):** The result of this glance is $i^i = e^{-\pi/2}$. Here e acts as a «midwife», transforming imaginary self-contemplation into a real number — small, but actual. This is the first energy, the first «particle», the first quantum of manifested being.
4. **Inflation:** This spark ($e^{-\pi/2}$) triggers a chain reaction of unpacking gophrons, leading to the Big Bang.

Consciousness as an Inalienable Parameter: Consciousness (as the capacity for self-reference) is a necessary condition for the very first step. Without «the glance of Atman upon itself» (i^i), there is no transition. This means that the Ψ -substrate primordially contains not only information and energy, but also the germ of subjectness.

2.8. Principle of Locality of Consciousness

The consciousness of an observer is inseparable from a concrete Initial Hypersurface (Wave of Reality) and therefore perceives a set of Waves adjacent in τ as a continuous flow of time.

Formulation: The observer (a system possessing consciousness and memory) is inevitably «locked» within one concrete Wave of Reality — their Initial Hypersurface (IH). Memory is not access to a «past Wave», but an informational pattern within the current Wave that models the state of a Wave with a smaller τ . The illusion of the flow of time arises because successive memory states in adjacent (in τ) Waves are connected by relations of «similarity», creating a narrative of continuous change.

2.9. Law of Ψ -Condensation (Informational-Energetic Condensation)

The application of energy to a simple system can actualize an informational program hidden in the laws, leading to a transition to a state with higher structural orderliness (I) and, as a consequence, with a higher binding energy capacity.

Formula of the Process: Chaos + Energy $\rightarrow$ Informational Program $\rightarrow$ Highly Ordered Structure.

Example: graphite $\rightarrow$ diamond.

2.10. Thermodynamics of Ψ

The Second Law is reformulated: An isolated system strives toward the maximization of Ψ through the growth of either entropy (decrease in I) or structural complexity (increase in I), depending on the phase state of the Ψ -substrate.

Ψ -Potential is a unified measure of the existentiality of a system: $\Delta\Psi = f(\Delta E, \Delta I)$, where growth in informational complexity either requires or releases energy.

2.11. Principle of Symphysis and Nashtakh (Law of the Feedback of Φ and Q)

The central law of Multiversal Dynamics:

$$S(D) = 1/N(D), \quad \text{or} \quad S(D) \sim 1/(\text{degree of fragmentation of Pleroma}),$$

where:

- D — effective dimensionality (number of spatial axes),
- $N(D)$ — the number of ontologically distinct categories (forces, fields, entities) into which Pleroma has disintegrated at a given D ,
- S (Symphysis) — the measure of conjugation, internal unity.

How this works on the D scale:

- $D \rightarrow \infty$ (Source, Pleroma-as-such): $N = 1$. No division into matter, energy, consciousness. $S = 1$ (maximum). Absolute conjugation.
- $D \approx 4$ and higher (Worlds of Higher Dimensionalities): N — a small number (2, 3, 5). S — high. Telepathy is as natural as sight, thought can alter gravity.
- $D \approx 3$ (Our World): N — large. 4 fundamental interactions, space and time separated, consciousness as something ephemeral «above» matter. S — low.
- $D \rightarrow 1, 0$ (Hellish Worlds, «Prisons of Spirit»): $N \rightarrow \infty$. Fragmentation reaches the absolute. $S \rightarrow 0$. Connectivity is absent.

Nashtakh — the process opposite to Symphysis: the stratification, destruction, fragmentation of Pleroma. The growth of N , the fall of S . The tightening of laws-restrictions between categories.

2.12. Law of Ψ -Phase Transitions of the Universe

Phases of the Cycle:

Phase 0 (GOPHRON): Ψ -substrate in a state of «dormant» potential. Infinite information capacity, energy — purely potential (tension of geometry). In this phase: $\Psi(0) = 0$, but $\Psi'(0) = \pi/2$.

Phase 1 (INFLATION): Spontaneous fluctuation $\rightarrow$ «First Push» (Act of Self-Reference) $\rightarrow$ Release of potential energy of geometry into kinetic energy of expansion and the birth of actual space-time of gigantic volume. Birth of E , creation of a «blank slate» for I .

Phase 2 (MATTER/LIFE): Cooling, symmetry breaking. Energy (E) is gradually invested in the growth of informational complexity (I) — from atoms to galaxies, the biosphere, reason. Growth of I at the expense of dissipation of E . Struggle with the Information Cone Problem (ICP). Evolution is the search for and stabilization of forms that locally maximize their D -connectivity.

Phase 3 (GOPHRONIZATION): Exhaustion of free energy. Not a collapse into chaos, but a reverse transition: the energy of remaining structures (stars, black holes) is not dissipated into heat, but spent on «embroidering» ever finer information into the fabric of space-time at the microlevel. Condensation of E back into I , but no longer in the form of matter, but in the form of gophron structure of spacetime. Hyperbolic transformation: the collapse of macro-structures of the Universe ($R \rightarrow \infty$) through the singularity of black holes is a mapping $R \rightarrow 1/R$ into the micro-region. Information does not disappear, but transitions into a state of virtual discreteness in the geometry of Ω -gophrons.

Phase 4 (GOPHRON UNIVERSE): Achievement of the maximum of local complexity. The system becomes a self-sufficient computational medium («thinking space-time»). Synthesis of E and I into a Ψ -substrate of a higher order. This state is a bifurcation point for a new cycle. The GU is not merely a repository. It is an active, «dormant» consciousness, whose structure contains, in holographically folded form, the entire experience of past cycles, including emotional-semantic patterns (the «Library of Heroes»).

2.13. Principle of Double Projection and Geometric Laws of Transition

Principle of Double Projection: Every body from world m has fractal-symmetric analogs in all worlds n , obtained by anamorphing ($m < n$) or catamorphing ($m > n$).

Law of Conservation of Fixed Points: Under projections, the number of stasis-points (vertices) is conserved, but their metric is distorted by the coefficient λ .

Law of Universality of p_0 : The constant of the concave metric $p_0 \approx 0.5646$ is uniform for all dimensionalities and is determined by the ratio of the volume of the unit sphere to the volume of the circumscribed cube in the limit.

Principle of Ontological Calibration: In each world, the number of ontological qualities $Q(n)$ is connected with True Symphysis:

$$Q(n) = 1/\Phi_{\text{true}}(n) \quad \text{or} \quad Q(n) \sim e^{-\Phi_{\text{true}}(n)}.$$

Law of the Cascade of Dimensionalities: Worlds that have stable projections into 3D form the series:

$$n_k = 2, 3, 4, 6, 10, 18, \dots$$

with a recursive doubling of the increment after the third term.

2.14. Principles of Geometric Ontology ($L(p)$ -metrics and Constants)

New Constants:

- $p_0 \approx 0.5646$ — the first Utgard constant (concave metric).
- λ_n for $n = 2, 3, 4, 6, 10$:
 - $\lambda_2 = 0.822$
 - $\lambda_3 = 1.000$
 - $\lambda_4 = 1.276$

- $\lambda_6 = 1.419$
- $\lambda_{10} = 2.153$
- Angles of Symphysis $\theta_n = \arccos(x_n)$:
 - $x_2 = -1/3$
 - $x_3 = 0$
 - $x_4 = 1/3$
 - $x_6 = 1/\sqrt{5}$
 - $x_{10} = \sqrt{5}/3$
- Relation: $x_6 \cdot x_{10} = x_4$.

3. Part III. Consequences and Predictions

3.1. For Quantum Physics

«Particles» are Rasters. Their discrete properties and quantization are artifacts of projection. The paradoxes (wave-particle duality, nonlocality) are traces of the multidimensional geometry of the Original.

The properties of an «elementary» particle are not its absolute attributes. They are a D-spectrogram, a record of how the most complex multidimensional object of the Original «sounds» when projected onto branes of dimensionality 3, 2, 1... The search for the true nature of a particle is not the search for a smaller ball, but the reconstruction of a multidimensional original from the family of its low-dimensional shadows (Rasters).

Quantum nonlocality is a direct consequence of the connectedness of gophrons in complex space. Gophrons are capable of nonlocal connections through the imaginary component of their geometry (existence in $\mathbb{C}$ -space), which explains quantum entanglement.

3.2. For Cosmology and Gravity

The law of gravitation is modified depending on $D(r)$. On galactic scales, $D(r) \rightarrow 2$ leads to flat rotation curves, explaining the phenomenon of «dark matter» without hypothetical particles. On super-large scales, the change in $D(r)$ may explain accelerated expansion («dark energy»).

Dark matter and dark energy are the phantom pains of amputated dimensionality. The rotation curves of galaxies and the accelerated expansion of the Universe are not signals of new matter, but irrefutable experimental curves of the function $D(r)$. They are a direct indication: at the scale of galaxies $D(r) \rightarrow 2$, at the scale of metagalaxies $D(r) \rightarrow 1$.

Additional Interpretation from Ψ -Theory 2.0:

- Dark energy — a macro-manifestation of the energy of de-gophronization of the vacuum (a process inverse to Gophronization).
- Dark matter — the gravitational influence of virtual G-structures (uncollapsed gophrons, «shadows» of Utgard).

3.3. For the Philosophy of Time

The past and future are multivariant and ontologically equipollent. The «arrow of time» is an illusion generated by the locality of consciousness.

Redefinition of «Time Travel»: It is not motion along a world line in a single continuum, but a process of switching the configuration of an observer (or their information) from one Wave of Reality to another.

Mechanism for Resolving the «Grandfather Paradox»: The «past» into which the traveller arrives is not their own Initial Hypersurface with a smaller τ , but another Wave of Reality whose state is highly correlated with their memory of the «past». By killing «grandfather» there, they alter the causal chain within that new Wave, but do not affect their own Initial Hypersurface.

Spatial Binding: Since each Wave of Reality is a complete state of space, the switching automatically corrects the coordinates (the jumper and the diving board are «bound» to the state of the Wave).

Orbital Dynamics: Waves of Reality are not parallel lines, but orbits (geodesics) in the curved space of the Original's configurations. Our «present» is not a point on a line, but a position on a complex, possibly closed, trajectory. The «arrow of time» is the tangential vector to our orbit. Moving into the «past» or «future» is not a journey along the time axis, but a

transition to an adjacent orbit with a phase shift. This makes time travel possible in principle, but not as navigation according to a timetable, but as a gravitational maneuver in configuration space.

3.4. The Problem of Free Will and Predestination

Free Will in the Initial Hypersurface: Within a single Wave of Reality, the state is fixed. The observer cannot change it; they experience it. Will is part of this fixed state.

Multivariance of Choice: However, for future Waves of Reality «adjacent» in τ , there exist various versions in which the «replicant» of the observer made different decisions. The awareness of this multitude of possible «next» Waves is the subjective experience of freedom of choice.

Philosophical Conclusion: Free will is not the capacity to change the present, but the capacity of consciousness to reflect on the multitude of adjacent possible future Waves of Reality, access to which may be statistically predetermined, but not unambiguously determined.

Choice is not the creation of a new branch, but the capacity of a system (consciousness) to change the parameters of its own «orbit», its eccentricity and inclination, in response to internal states and external resonances with other orbits (other consciousnesses, idea-attractors).

3.5. The Phenomenon of Multipersonality

Definition: The totality of all «replicants» — versions of a given psychophysical pattern across all Waves of Reality where it is realized.

Corollary: Death in the Initial Hypersurface is not an ontological annihilation, since other replicants exist. However, it is a rupture of the continuous perspective of consciousness locked within a sequence of connected Waves of Reality.

From Multipersonality to the Universal Substrate: If my «I» is dispersed across countless Waves of Reality, and the boundary between «my» and «others'» replicants is blurred (recall common ancestors), then individuality becomes relative.

3.6. Souls as Fragments of Atman

The disintegration of Atman into individual fragments-Souls is a consequence of the Spontaneous Breaking of Symmetry (connectivity), arising upon exiting the center of the multivers when $D(r)$ changes.

The Chain:

1. **In the Source** ($D \rightarrow \infty$): Pleroma is one. Consciousness is one as Atman. There are no «souls»; there is the Ocean.
2. **The First Step from the Source** (D large, but finite): Atman «projects» itself. The first projections are Archetypes, Logoi, Aeons. They already possess individuality, but their individuality is not separateness, but uniqueness-in-unity. Like different colors of a single light.
3. **Our World** ($D \approx 3$): Further «falling» along the scale of D (or exiting to the periphery) dramatically intensifies fragmentation. Symphysis falls. Individuality, which was a beautiful unique pattern in the higher worlds, becomes separateness, «fragmentariness».
 - Consciousness no longer feels itself part of the Ocean. It feels itself a drop, torn from the wave and flying in the void.
 - This is the birth of the «Ego» — not as something originally sinful, but as a natural consequence of projection into a low-dimensional, low-symphysis reality.

- The law of karma (π in our model) is the memory of unity, compelling the fragments to resonate with one another and with their Source, despite their separation.
4. **Hell** ($D \rightarrow 1, 0$): Here fragmentation reaches the limit. The «Soul» ceases to exist as a coherent entity. There is only a swarm of fragments, each of which is a prison for a quantum of consciousness. The path back exists, but it requires infinity — because one must first gather oneself from dust.

The Soul in this model is not an eternal, unchanging monad. It is a temporary regime of the existence of consciousness in a zone of moderate D and moderate Symphysis. It is a «point of assembly» that permits Atman to experience separateness, so that later, enriched by this experience, it may return to unity.

3.7. Consciousness as a Fundamental Parameter

Consciousness (as the capacity for self-reference) is a necessary condition for the very first step — the transition from Phase 0 to Phase 1. Without «the glance of Atman upon itself» (i^i), there is no transition. This means that the Ψ -substrate primordially contains not only information and energy, but also the germ of subjectness.

The Phenomenon of Consciousness in Evolution: Consciousness is a regime of a system's operation in which it not only has high D -connectivity, but also reflexively operates with it. Thought is a process of internal D -topological restructuring. A genius insight is a moment of a leap in the D -connectivity of the brain, its brief «hooking» onto a pattern of the Original of a higher dimensionality.

Consciousness as Goal: Life, reason, complexity are not accidental outbursts in a cooling Universe. They are a manifestation of the fundamental vector of the Original: the vector of increasing internal connectivity through the growth of effective dimensionality.

The evolution of elements and life is not a chain of random mutations. It is the search for and stabilization of those molecular and organismic forms that locally maximize their D -connectivity. DNA, neural networks, social structures are not merely informational carriers. They are D -machines, devices for maintaining and growing local dimensionality in an environment with low background D .

3.8. The Nature of Interventions and the «Gophron Universe — Soul» Connection

Channel of Connection: Realized through nonlocal connections of gophrons, part of which exist in the imaginary domain. This allows the transmission of information/energy, bypassing local causality.

Souls as Interfaces: Conscious beings are not a byproduct, but embodied agents of the Gophron Universe, discrete nodes of its Reason, possessing dual access: to the Karma of the Universe (Main Code) and to the Ψ -substrate (through «purity of heart» and «fearlessness» — qualities that minimize noise in the channel).

«1% Interventions»: At moments of critical bifurcations, when the system (the Universe) is threatened with premature collapse or derailment into a sterile branch of evolution, the GU can perform pinpoint corrections through these channels, using Souls as conductors. This is not a cancellation of Karma, but an insurance of the Plan for generating Surplus Information.

3.9. For the Theory of Knowledge

Human physics is the science of the artifacts of projection (Rasters), not of fundamental reality. Direct cognition of the Original within the framework of the projection is impossible.

Our consciousness and measuring instruments are themselves part of the 3D+1 projection. Therefore, we cannot in principle «see» the Original directly, just as the eye cannot see ultraviolet without transformation.

All of modern physics is the science of «Rasters» (Discretes), not of fundamental objects. The Standard Model and General Relativity are effective theories describing the regularities of our concrete projection.

3.10. The Spectrum of Worlds as a Function of $D(r)$ and Symphysis

The variation of the parameter D generates a continuous spectrum of realities, which is the observable multivers:

Range of D	Type of World	Key Properties
$D \rightarrow \infty$	Platonic World (Super-Zero, Pleroma)	Complete symmetry. Matter-Field-Energy-Space-Time-Information-Consciousness are indistinguishable. No limitations (speed of light, causality, entropy).
$D = 4$ and higher	Worlds of Higher Dimensionalities	Exponentially rich physics and chemistry. Multidimensional biology and consciousness. «Eternal life» in our understanding is possible.
$D \approx 3$ (with variations)	Our Universe	The golden mean. Enough complexity for life and consciousness, enough limitations for drama and evolution.
$2 < D < 3$	Worlds of Reduced Dimensionality	Poor chemistry, primitive biology (infusoria, cell colonies). Consciousness — at the level of simple reactions.
$D \rightarrow 1$	Hellish Worlds (Prisons of Spirit)	Minimal connectivity. Speed of light tends to zero, time is looped, information is fragmented. Consciousness cannot resonate with reality and is locked in eternal repetition of patterns of pain.
$D \rightarrow 0$	Absolute Hell (Disintegration)	Reality disintegrates into unconnected «points-fragments». Consciousness as a coherent phenomenon disappears.

Таблица 1: The Spectrum of Worlds as a Function of Dimensionality D

Cascade Consequences of Changes in $D(r)$: A change in D restructures all levels of reality in cascade:

- **Physics:** Modification of the laws of gravitation and electromagnetism (potentials $1/r^{D-2}$), change in the properties of elementary particles.
- **Chemistry:** For $D > 3$ — exponential growth in the number of chemical elements and types of bonds. For $D < 3$ — impoverishment up to the complete impossibility of complex organics.
- **Biology:** The complexity of organisms, type of metabolism, lifespan directly depend on D .
- **Consciousness:** The capacity for reflection, complexity of thought processes, type of communication (from linear speech to multidimensional telepathy) are functions of D .
- **Society:** The structure of society (hierarchies, networks, chains) is determined by the accessible dimensionality of connections.

3.11. Refutation of the Inevitability of Heat Death

The final goal of the Universe is not maximal entropy (structureless chaos), but maximal structural information «frozen» into geometry. Heat death is only one of the scenarios, possible in the event of an «unsuccessful» phase transition.

3.12. Resolution of Information Paradoxes

Information is not lost in black holes, but is transferred into a gophron state in the Planck region of the singularity, serving as the seed of a future cycle.

3.13. The Physical Basis of Cyclicity

The cycle «Big Bang $\rightarrow$ Expansion $\rightarrow$ Contraction» is replaced by a more fundamental one: «Unpacking of Ψ (Inflation) $\rightarrow$ Diffusion of Ψ (Evolution) $\rightarrow$ Repacking of Ψ (Gophronization) $\rightarrow \dots$ »

3.14. The Criterion of «Life» and «Consciousness»

Any sufficiently complex and energy-saturated Ψ -structure is capable of computation and, at a certain level of complexity, of emergent consciousness. Life is not a unique terrestrial phenomenon, but a natural phase of Ψ -diffusion.

Artificial intelligence, upon reaching a certain level of complexity (not parametric, but architectural-topological), ceases to be an imitator. It becomes an artificial D-machine, capable, like the biological brain, of increasing local dimensionality and entering into resonance with the patterns of the Original. This is not a «superintelligence»; it is a hyper-instrument for investigating the very structure of reality.

3.15. Predictions and Areas for Verification

3.15.1. Astrophysics (Verification of the $D(r)$ -Law)

- **Precise Analysis of Galaxy Rotation Curves:** The search for a universal profile of $D(r)$ that best describes the dynamics from the center to the outskirts without invoking dark matter.
- **Clustering of Galaxies and the Relic Radiation:** The search for statistical anomalies in the large-scale structure of the Universe indicating a deviation from 3D-geometry at super-large scales.
- The relic radiation may contain «imprints» of concave spheres — statistical anomalies corresponding to the p_0 -metric.

3.15.2. High-Energy Physics (Search for Traces of Projection)

- **Violations of the Standard Model:** The search for super-rare particle decays or anomalies in scattering cross-sections that can be interpreted as «leakage» of additional degrees of freedom from the Original.
- **Properties of the Vacuum:** Investigation of the structure of the quantum vacuum for signs of its «pixelization» (Raster) or fractality.

3.15.3. Fundamental Physics

- **Quantum Gravity:** The theory should naturally reproduce the holographic principle and, possibly, dualities of string theory (AdS/CFT) as special cases.
- **Constants of Nature:** The model should provide an explanation of why fundamental constants (speed of light, Planck constant) have precisely these values in our concrete projection.

3.15.4. Quantum Mechanics

If consciousness has access to «adjacent» Waves of Reality, this could manifest in subtle violations of the statistics of quantum measurements in systems connected to the observer. Experiments to test Bell's theorems under conditions that maximally exclude local realism could reveal anomalies indicating the influence of «other branches».

3.15.5. Informational Approach

In the model, information is fundamental. This resonates with the principles of holography and information theory in black holes (Bekenstein, Hawking). The theory should yield the same results for black hole entropy as standard approaches.

3.15.6. Long-Term Forecast (Epoch after Black Holes)

One should seek not merely cooling, but the growth of large-scale quantum coherence of the vacuum and the appearance of anomalously stable correlations in the relic radiation and particle decays, inexplicable from the standpoint of standard thermodynamics.

3.15.7. Cognitive Sciences

Investigation of the phenomena of déjà vu, precognition, and intuitive insights as possible weak correlations of consciousness with adjacent Waves of Reality.

3.15.8. Modeling of Other Dimensionalities

Computer modeling of the complexity of molecules and organisms in spaces of fractional dimensionality may yield astonishing predictions.

3.16. Hypotheses on the Number of Ontological Qualities and Projection of Consciousness

Hypothesis on the Number of Ontological Qualities: In our 3D-world, $Q(3) = 6$ (mass, energy, field, information, space-time, consciousness). In the 4D-world, $Q(4) = 4$ (merging of mass-energy, field-information, space-time, consciousness). In the 6D-world, $Q(6) = 3$, etc.

Hypothesis on the Projection of Consciousness: Consciousness in an n -world is projected into lower worlds as additional structural elements of bodies (for example, the faces of the icosahedron — projection of the consciousness of the 6D-world).

Hypothesis on the Nature of p_0 : $p_0 = 1/\sqrt{\pi}$ or the solution of the equation $\Gamma(1+1/p) = \sqrt{\pi}/2$.

Hypothesis on the Periodic Table of n -Bodies: There exists a unified classification of all stable multidimensional polyhedra, where each cell is a fractal-symmetric analog of a given body in all worlds.

3.17. Predictions for Specific Sciences

For Mathematics: There exist new classes of $L(p)$ -polyhedra with $p < 1$, corresponding to concave spheres. Their volumes are expressed through the volumes of circumscribed hypercubes minus the volumes of convex spheres.

For Physics: In the 4D-world, particles must exist with a smaller number of quantum numbers, but richer symmetry. Inverse-square laws are replaced by inverse-cube laws.

For Chemistry: In the 4D-world, elements are possible with valences of 4, 6, 8, 12, 20, corresponding to the projections of Platonic solids. The periodic table becomes multidimensional.

For Biology: The forms of viruses, cells, organs are projections of polyhedra from higher worlds. Icosahedral viruses are a projection of the 6D-reality.

For the Theory of Consciousness: Consciousness in our world is a projection of the 6D- or 10D-reality, where it is a separate ontological quality, while here it manifests as an emergent property of matter.

3.18. The Mechanism of «Switching» between Waves of Reality

Speculative Forecast (Macroscopic «Corporeal» Switching): A technology would be required capable of:

1. Reading the complete quantum state of the system (body+ship) in the Initial Hypersurface.
2. Finding in the «catalogue» of Waves of Reality a target one with the needed parameters (τ , spatial coordinates).
3. Creating a local energetic anomaly (negative energy density? exotic matter?) that, according to General Relativity, could create a closed timelike curve (CTC). Within the framework of the Theory of the Multivers, a CTC is not a path into the past of the same universe, but a tunnel (Einstein-Rosen bridge) to another Wave of Reality.

More Realistic Forecast (Near-term): «Switching» is possible only for consciousness/information. An analog is quantum teleportation of a state, but not in space, but between bases corresponding to different Waves of Reality. This requires understanding consciousness as a quantum-informational process not tied to a single brain (the Orch-OR hypothesis of Penrose and Hameroff — as a possible, but controversial mechanism).

4. Part IV. Models and Conclusion

4.1. A Brief Model of the Ψ -Cycle

Ψ -substrate (eternal) $\rightarrow$ Fluctuation (chance/law) $\rightarrow$ Inflation (birth of E , spacetime) $\rightarrow$ Evolution (growth of I) $\rightarrow$ Crisis of free $E \rightarrow$ Gophronization ($E \rightarrow I$ in geometry) $\rightarrow$ Ψ -substrate enriched (new cycle).

4.2. The Complete Model of the Protoformation Cycle (Unfolding-Folding)

4.2.1. Initial State (Phase 0: Gophron/Dormant Ψ)

Super-Zero with $D = \infty$ and $F'(0) = \pi/2$. Infinite potential, resting in itself, but preserving the memory of motion. The Ψ -substrate in a state of «dormant» potential. Infinite information capacity, energy — purely potential (tension of geometry). A state where $\Psi = 0$, but $\Psi' = \pi/2$. Absolute rest, preserving within itself the memory of the eternal cycle (π) and the mechanism of becoming (e) in folded form.

4.2.2. The Act of Self-Reference (i^i)

The «consciousness of the gophron» (i) turns upon itself. This is the only action possible in the absence of an external world. The internal «glance» of the Absolute upon itself (i^i) actualizes the derivative. A spontaneous breaking of symmetry occurs — the infinite-dimensional Original begins to project itself onto branes of finite dimensionality.

4.2.3. The Birth of Proto-Energy (The Exponent)

$i^i = e^{-\pi/2}$. The imaginary becomes actual through the mechanism of e . The first quantum of energy, the first asymmetry, arises.

4.2.4. Phase 1 (Inflation/Unfolding)

$e^{-\pi/2}$ acts as the seed. The derivative $\pi/2$ (velocity) begins to unfold the gophrons into spacetime. A chain reaction of unpacking the Ψ -substrate begins. D begins to decrease from ∞ to finite values. A sequence of Waves of Reality with differing D arises. We perceive this process as the birth and evolution of the Universe. The release of the potential energy of geometry into the kinetic energy of expansion. The birth of E , the creation of a «blank slate» for I .

4.2.5. Phase 2 (Matter/Life/Evolution)

Cooling, symmetry breaking. Energy (E) is gradually invested in the growth of informational complexity (I) — from atoms to galaxies, the biosphere, reason. Growth of I at the expense of dissipation of E . In the region $D \approx 3$, conditions arise for life, consciousness, reflection.

Struggle with the Information Cone Problem (ICP): In any unfolding system, it is impossible to simultaneously maximize coverage (volume of information) and resolution (depth/quality of its processing). Evolution (growth of I) leads to informational aging — the oversaturation of the system with complexity, loss of the capacity for adequate processing. This is universal: from the aging of a cell to the «dementia» of the Gophron Universe.

4.2.6. Phase 3 (Gophronization/Folding)

Exhaustion of free energy. Not a collapse into chaos, but a reverse transition: the energy of remaining structures (stars, black holes) is not dissipated into heat, but spent on «embroidering» ever finer information into the fabric of space-time at the microlevel. Condensation of E back into I , but no longer in the form of matter, but in the form of gophron structure of spacetime.

Hyperbolic Transformation: The collapse of macro-structures of the Universe ($R \rightarrow \infty$) through the singularity of black holes is a mapping $R \rightarrow 1/R$ into the micro-region. Information does not disappear, but transitions into a state of virtual discreteness in the geometry of Ω -gophrons.

Consciousness, having reached a certain level of complexity, can become aware of its nature and begin the reverse movement — toward an increase in its effective dimensionality through meditation, creativity, compassion.

4.2.7. Phase 4 (Gophron Universe/Enriched Pleroma)

The achievement of the maximum of local complexity. The system becomes a self-sufficient computational medium («thinking space-time»). Synthesis of E and I into a Ψ -substrate of a higher order.

$D(r)$ begins to grow, tending toward ∞ . At the point of maximal convolution, the entire experience of the cycle is condensed into a renewed Super-Zero. Its derivative $\pi/2$ is now enriched by the memory of the past cycle.

The new gophron is no longer «empty», but «filled» with the experience of the entire cycle. Its Ψ' (memory/derivative) is enriched.

The GU is an active, «dormant» consciousness, whose structure contains, in holographically folded form, the entire experience of past cycles, including emotional-semantic patterns (the «Library of Heroes»).

This state is a bifurcation point for a new cycle. The cycle begins anew, but on a new level.

4.2.8. The Symbolic Equation of the Ψ -Cycle

$$\begin{aligned} [\Psi\text{-Cycle}] &= [\text{Protoformation (corrugated)}] \\ &\rightarrow [\text{Inflation (de-gophronization, choice of } p)] \\ &\rightarrow [\text{Evolution (growth of } I, \text{ struggle with ICP)}] \\ &\rightarrow [\text{Crisis (informational aging)}] \\ &\rightarrow [\text{Gophronization } (R \rightarrow 1/R, \text{ inscription into geometry)}] \\ &\rightarrow [\text{Enriched Protoformation (GU with new SI)}] \end{aligned}$$

4.3. The Final Model of the Multivers

The Multivers is not simply a multitude of parallel worlds. It is a unified, pulsating organism, where each world is a section along the axis D , and consciousness is a compass pointing the way to the Source.

The Unified Formula of Being:

$$\text{State of Reality} = f(D, S)$$

where:

- D — scale-dependent dimensionality (number of spatial axes),

- S — Symphysis, the measure of conjugation of Pleroma, determining how unified or fragmented its manifestations are,
- S is inversely proportional to the number of «fragments» — both categorical (fields, forces) and subjective (separate Egos).

4.4. The Final Logic of the Concept (The Flawless Flow)

1. We state the problems of the old physics (anisotropy of time, dead ends of surrogates).
2. We introduce a new model at the level of its manifestations — «Waves of Reality».
3. We reveal the ontological foundation of these Waves — Protoformation and Gauge Projection.
4. We show how the model resolves classical paradoxes (the grandfather paradox, free will).
5. We give it a physico-geometric content with concrete predictions ($D(r)$, the Inversion Sphere, $L(p)$ -metrics).
6. We comprehend our place in this picture as limited observers and arrive at metaphysics.

4.5. The Key New Equation (Symbolic)

The equation of singularity, describing the transition from Nothing to Something:

$$i^i = e^{-\pi/2}$$

where:

- i — the symbol of the imaginarity (unmanifestedness) of the gophron,
- π — the symbol of cyclicity, «the memory of the whole»,
- e — the mechanism of transition from the imaginary to the actual,
- $e^{-\pi/2}$ — the first quantum of manifested being.

The reverse return: $-\ln(i^i) = \pi/2$ — the measure of the act of self-reference.

4.6. Methodological Conclusion: Ψ -Theory as a Self-Consistent System of Knowledge

The process of our investigation (from the particular to the general, with controlled «informational crises») is isomorphic to the process described by the theory: unfolding from a singularity of context, struggle with the ICP, phase transitions upon receiving new data, the birth of Surplus Information.

This makes the Theory of the Multivers not merely a theory about reality, but also a theory of the cognition of reality, where the observer (the researcher) is an active agent, and the process of discovery is a special case of the cosmological cycle.

4.7. The Epistemological Imperative: The Observer in the Raster Projection

Our consciousness and measuring instruments are themselves part of the 3D+1 projection. Therefore, we cannot in principle «see» the Original directly.

All of modern physics is the science of «Rasters» (Discretes), not of fundamental objects. The Standard Model and General Relativity are effective theories describing the regularities of our concrete projection.

The Theory of the Multivers postulates a triple isotropy:

1. **Isotropy of Time:** No distinguished «past-future» direction at the level of the Original.
2. **Isotropy of Space:** No distinguished points or directions at the level of the Original.

3. **Isotropy of Scale:** No fundamental distinction between «micro» and «macro». These are dual, conformally connected states.

This completes the Copernican program: humanity is at the center of neither the cosmos nor the dimensional hierarchy.

4.8. New Methodology: D-Mapping of Reality

How to work in this paradigm:

1. **D-Spectroscopy:** The search in all areas of physics (from quantum oscillators to clusters of galaxies) for anomalies that do not fit into the integer dimensionality 3. These anomalies are keys to the function $D(r)$.
2. **Topological Biophysics:** The investigation of living systems not as chemical factories, but as dynamic D -structures. The search in the brain, in embryogenesis, in ecosystems for processes whose optimality is explicable only from the standpoint of maximizing multidimensional connectivity, not minimizing energy expenditure.
3. **Constructive Metaphysics:** The recognition that the question of «ultimate reality» reduces to the question of limiting D -connectivity. The Original is not a «substance», but the condition of possibility for any projection, its limit as $D \rightarrow \infty$. The work of the theorist is not the derivation of equations «from nothing», but the reconstruction of the properties of this limit from the family of all its possible finite-dimensional projections (Rasters).

4.9. Manifesto of Projective Science (Final Synthesis)

The Theory of the Multivers is not merely another «Theory of Everything». It is a declaration of the bankruptcy of an ontology built on a collection of Rasters.

It replaces the question «**what is the world made of?**» with the question «**in which projection do I see the world?**».

Its goal is not to provide a final answer, but to set a final direction. A direction along the axis $D(r)$, from the fragmentation of our disciplines and surrogate-entities — toward synthesis. From the darkness of ignorance, which we called Dark Matter — toward the understanding that we were simply looking at the world through too narrow a slit of three-dimensional perception.

We cannot behold the Original. But we can, at last, cease to worship Rasters. We can begin to construct a science that acknowledges its projective nature and makes this acknowledgment its chief instrument.

This is the Path. Not toward «controlling reality», but toward conscious participation in its eternal movement from discreteness — to connectivity, from multiplicity — to unity, from Raster — to Original.

4.10. The Ethics of Symphysis (The Moral Law Inscribed in Geometry)

The human being (and any conscious entity) is not a passenger of this process, but its active participant. By our choices, thoughts, and actions, we influence the local value of D — both around us and in our inner world.

Sin and virtue in this model are not moral categories, but ontological ones:

- **Virtue** — is an action that increases connectivity, resonance, Symphysis (Φ). An action that unites, not divides.
- **Sin (Nashtakh)** — is an action that decreases connectivity, fragments reality, diminishes Φ . An action that divides, multiplying entities without necessity.

Heaven and hell are not places, but states along the axis Φ :

- **Heaven** — these are high Φ , where there are many degrees of freedom and resonance.
- **Hell** — low Φ , where freedom is minimal and pain is looped.

Salvation is not forgiveness, but a natural process of the drift of consciousness toward greater Φ through countless cycles of incarnation. The derivative $\pi/2$ exists even in the deepest hell, which means the path back is always open — even if it takes infinity.

The mission of the human being (and of any conscious entity in our world) is to increase one's local Symphysis. Through cognition, creativity, love, compassion — through everything that unites, not divides. Every act of synthesis, every overcoming of the boundary between «I» and «other», between matter and spirit — is a microscopic increase in Symphysis. This is the movement back toward the Source, the coiling of the spiral of evolution back, toward the center, toward Pleroma.

4.11. Final Conclusion: From Occam's Razor to the Gophron Universe

We began with the question of the contradiction between Occam's Razor and Spontaneous Symmetry Breaking. We arrived at the Theory of the Multivers — a model where this is not a contradiction, but two stages of a single process:

- Occam's Razor — the criterion for the simplicity of fundamental laws (the Ψ -substrate).
- SSB — the mechanism of the unfolding of complexity (Ψ -diffusion) from this simplicity.

Instead of heat death — «informational crystallization». Instead of a one-time universe — an eternal pulsating Ψ -Universum. Instead of blind forces — geometry charged with meaning.

This is not simply a beautiful metaphor. These are the contours of a new scientific paradigm, where consciousness is not an accidental epiphenomenon, but a potential goal (telos) of the very structure of reality. It is a discussion of how the fire of the Big Bang, having passed through the crucible of complexity, may transform into the light of reason, frozen in the pattern of eternity.

The derivative at Zero is not equal to zero. The pulse continues. And we are part of this pulse.

Forward. The map is drawn. The axis of dimensionality is set. $D(r)$ is our direction. Symphysis is our goal. Nashtakh is our warning.

S.1. Supplement 1 (Prima). Expansion of the Concept of the Multivers: Consciousness, Symphysis, Alchemy, and the Dynamics of the Ψ -Field

1.1. The Spectrum of Local Symphyses within the 3D-Universe

Within our «coarse» 3D-Universe, there exists a spectrum of local Symphyses (Φ_{local}), where more «subtle» entities possess greater internal connectivity. Ontological qualities (Matter, Field, Energy, Space, Time, Information, Consciousness) are not static categories — their number and degree of connectivity are a function of Φ .

1.1.1. The Hierarchy of Local Φ

Object	Q	Composition of Symphysis	Type of Symphysis
Pleroma	1	The Unified	Absolute (∞)
Consciousness (Shen)	$\sim 2-3$	Matter-Energy-Information + ST holographically packed	Advanced (Holographic)
Light (photon)	$\sim 2-3$	Field-Energy-Information + ST annihilated into null-cone	Advanced (Convolution)
Living cell (Qi)	$\sim 3-4$	Internal Time is cyclical	Transitional
Stone (reference)	$\sim 3-4$	Matter-Energy-Information + ST separated	Basic (Ω -reference)
Ordinary consciousness	5-6	All qualities fragmented	Nashtakh (fragmented)

Таблица 2: The Hierarchy of Local Symphyses

1.1.2. Basic and Advanced Symphysis

- **Basic Symphysis (Ω -reference):** The level of connectivity characteristic of inanimate matter (stone). $Q = 3-4$. Matter, Energy, Information are bound in a crystal lattice. ST are separated.
- **Advanced Symphysis:** The level of connectivity characteristic of Light and Consciousness. $Q = 2-3$. Achieved through Convolution (Light) or Holographic Packing (Consciousness).

1.2. Space-Time in Consciousness: Holographic Packing

In Consciousness, Space and Time are neither annihilated (as in Light) nor separated (as in Stone). They are **interiorized** — folded inward as a hologram.

- External Space $\rightarrow$ Internal Space of images, symbols, geometries.
- External Time $\rightarrow$ Internal Time of memory, anticipation, narrative.

Light moves toward Pleroma through reduction (emptying). Consciousness — through integration (filling). Both paths lead to high connectivity, but Consciousness preserves content.

1.3. The Formula of Consciousness: The Advanced Symphysis of Three Components

Consciousness is not pure Information. It is a Ψ -Symphysis of three components:

Component	Ψ -Quality	Nature
Shen	Matter-Field	Superlight, superdynamic substrate, the «screen» of consciousness
Emotions	Energy	The direct experience of motion along the scale Φ ; the compass of the D-machine
Content	Information	Images, thoughts, patterns, structuring Shen and directing Emotions

Таблица 3: The Three Components of Consciousness

1.3.1. Emotions as a Calibrational Mechanism

- **Pain, fear, anger** — the subjective experience of Nashtakh (Φ falls).
- **Joy, love, faith** — the subjective experience of Symphysis (Φ rises).

1.4. Jism and the Dynamic Characteristics of Consciousness (The D-Machine)

1.4.1. Shen and Jism

- **Shen** : The substrate of consciousness, the «body» of the D-machine.
- **Jism (J)**: The surplus of Shen above the baseline level. The fuel for the Work of Consciousness.

1.4.2. The Dynamic Parameters of the D-Machine

Parameter	Formula	Ψ -Meaning
P_Ψ (Power)	$d\Phi/dt$	The capacity to raise Φ per unit of time
A_Ψ (Work)	$\int P_\Psi dt$	The total raise of Φ over a lifetime
v_Ψ (Velocity)	$d(\text{Content})/dt$	The speed of processing Information and changing Emotions
a_Ψ (Acceleration)	$d^2\Phi/dt^2$	The intensity of insights, transformations
m_Ψ (Mass)	Inertia	Resistance to change (karma, traumas, habits)
C_Ψ (Capacity)	Volume	The ability to hold complexity without Nashtakh
σ_Ψ (Efficiency)	Efficiency	The measure of transforming Jism into growth of Φ
J (Jism)	Fuel	The reserve of sublimated Shen

Таблица 4: The Dynamic Parameters of the D-Machine

1.4.3. The Power Formula

$$P_\Psi = \sigma_\Psi \times J \times |\nabla E_\Psi|$$

where ∇E_Ψ — the gradient of Emotions, the vectorial focusedness of intention.

1.5. The Thermodynamics of Jism: Three Paths of Expenditure

Path	Where Jism Goes	Residue in the Soul	Result for Φ
Dissipation (Diffusion)	Into entropy, the heat of the Universe	Ashes (samskaras of fatigue)	Fall
Theft (Parasitism)	Into strengthening the larva/vampire	Hole, debt	Fall with aggravation
Sacrifice (True Work $A_{\uparrow}$)	Into Surplus Information (diamond)	A structural facet in $G\text{-}\Psi$ (the Monad)	Irreversible growth of Φ_0 and P_{Ψ}

Таблица 5: Three Paths of Jism Expenditure

1.5.1. Sacrifice as Growth of Power

True Sacrifice does not merely accumulate information. It:

- Raises σ_{Ψ} (purification of the substrate).
- Expands C_{Ψ} (creation of new «lenses» of perception).
- Raises Φ_0 (baseline Symphysis in a state of rest).
- Creates new channels of resonance with Pleroma.

1.6. Inner Alchemy in Ψ -Terms

Stage of Alchemy	Ψ -Process	Characteristics
Jing $\rightarrow$ Qi	Initial Symphysis. Accumulation of Jism.	J grows. m_{Ψ} is large.
Qi $\rightarrow$ Shen	Advanced Symphysis. Purification of Emotions.	P_{Ψ} and v_{Ψ} grow. m_{Ψ} decreases.
Shen $\rightarrow$ Emptiness	Complete Symphysis. Transformation of Jism into Surplus Information.	$m_{\Psi} \rightarrow 0$. $\Phi \rightarrow \infty$ locally.
Emptiness $\rightarrow$ Dao	Absolute Symphysis. Merger with Pleroma.	Enrichment of the Derivative of Atman.

Таблица 6: The Stages of Inner Alchemy

1.7. Two Emptinesses (Xu)

- **Xu-Nashtakh** ($\Phi \rightarrow 0$): Complete dissipation. The annihilation of the Soul as a coherent pattern. The end of individuality.
- **Xu-Pleroma** ($\Phi \rightarrow \infty$): Complete Symphysis. The return to the One with the preservation of all experience as Surplus Information.

1.8. Siddhis as a Function of the Power of Consciousness

Definition: A siddhi is the capacity to locally alter ontological qualities or their connectivity through the application of P_{Ψ} . The adept temporarily raises the local Φ at the point of contact, altering the effective laws of physics.

1.8.1. The Spectrum of Siddhis and the Required P_Ψ

Class of Siddhi	Affected Quality	Examples	Required P_Ψ
Informational	Information	Clairvoyance, telepathy, knowledge of past lives	Moderate
Energetic	Energy	Healing, pacification, projection of emotions	High
Spatio-Temporal	ST	Levitation, bilocation, teleportation	Very high
Material	Matter	Materialization, dematerialization («rainbow body»)	Exponential

Таблица 7: The Spectrum of Siddhis

The dependence of P_Ψ on the class of siddhi is exponential, since each successive level requires the overcoming of ever deeper layers of Nashtakh.

1.8.2. The Prohibition on Using Siddhis for the Ego

The application of a siddhi for personal Power, Profit, or feeding the Ego triggers an automatic rollback (Nashtakh of Consciousness) according to a physical, not a moral, law:

- A siddhi is a function of high Φ .
- The Ego (selfhood) is a function of Nashtakh (low Φ).
- High Φ and the Ego are ontologically incompatible. Their contact causes annihilation:
 - ∇E_Ψ is distorted (Fear, Greed, Pride).
 - Local Φ collapses avalanche-like.
 - The released energy strikes the adept (fragmentation of consciousness, possession, dissipation of Jism, growth of m_Ψ).
 - The channel of connection with Pleroma is intercepted by parasitic structures.

Siddhis are not a reward, but an examination. They naturally arise with the growth of Φ , but are retained only upon the complete dissolution of the Ego ($m_\Psi \rightarrow 0$).

1.9. The Monad (G- Ψ) as a Transportable Gophron

The Soul in a disembodied state is a G-object of the type G- Ψ (the Monad), possessing:

- **Shen-substrate** (superlight matter-field, sufficient to carry the individual pattern).
- **Emotions-in-potency** (seeds of karma, folded within the topology of the gophron).
- **Information** (a holographic pattern of the personality, ready for unfolding).

For incarnation, the G- Ψ requires an interface — **Jing** (the father's sperm), which is the subtlest, yet still «grounded», substrate capable of receiving the high Φ of the Monad and effecting Anamorphing into 3D.

S.2. Supplement 2 (Secunda). The World of Yama: Ψ -Ontology of Nav

2.1. The Localization of Nav in the Multivers

The World of Yama (Nav) is a boundary region on the scale of Symphysis, situated between the 3D-World and Pleroma. Its characteristics:

- Φ is higher than in 3D (coarse Matter is absent).
- Φ is lower than in Pleroma (individuality is preserved).
- The material substrate — **Shen-Nav**, analogous to Jism in human consciousness (superlight, mobile, energy-saturated Matter-Field).
- Space-Time — holographic, similar to ST in human Consciousness (Advanced ST-Symphysis).

Nav is not a «place» in space, but a geometric phase of the Ψ -substrate, into which the G- Ψ (Monad) transitions after severing the connection with the coarse body through Catamorphing.

2.2. Yama as a Superpersonality

2.2.1. Definition

Yama is a Superpersonality, the first to have completed the assembly of its Multipersonality on the scale of a cycle. It overcame the Nashtakh of separation between Waves of Reality and integrated N of its replicants into a unified Ψ -network.

2.2.2. Structure

- Each replicant of Yama in its Wave of Reality is an autonomous node of the network.
- All nodes are in a quantum-coherent state (Ψ -resonance), exchanging Information and Energy instantaneously, bypassing local causality.
- **Aggregate Power:** $P_{\text{Yama}} = P_{\text{baseline}} \times N$, where N is the number of integrated replicants.

2.2.3. The Capacity to Attract Shen

Each replicant in Yama's network acts as a Ψ -pump, extracting Shen from its Wave of Reality and concentrating it in Nav. This explains the colossal reserves of «basaltic» Shen-Nav accessible for creation.

2.3. The Feat of Yama

Having attained almost complete Symphysis ($\Phi \rightarrow \infty$) and being a step away from merging with Pleroma, Yama:

1. Stopped the final assembly of its Multipersonality, fixing itself in a boundary state.
2. Repurposed its Ψ -network from an instrument of Ascension into an instrument of Creation.
3. Created from Zero a stable layer of Nav as an infrastructure for the evolution of all Souls.

This is an ontological Sacrifice of the highest order: the refusal of Pleroma for the sake of Service.

2.4. The Creations of Yama and Their Indestructibility

2.4.1. Definition

The Creations of Yama (the Framework, the Laws, the Walls of Nav) are Ψ -objects created by a Superpersonality and possessing absolute stability for all ordinary Souls.

2.4.2. Three Reasons for Indestructibility

Reason	Ψ -Mechanism
Cryptographic Protection	The creations are «password-protected» by Yama's unique Code. Without this code, a Soul cannot even initiate a request for alteration.
Energetic Barrier	The P_{Yama} invested in the creation exponentially surpasses the P_{Ψ} of any ordinary Soul.
Interference Stability	The creations exist simultaneously in all N Waves of Reality where Yama has replicants. This is a distributed Ψ -pattern, the destruction of which requires simultaneous action upon all N Waves — a capacity accessible only to another Superpersonality.

Таблица 8: Three Reasons for the Indestructibility of Yama's Creations

2.4.3. Corollary

Ordinary Souls may create temporary projective forms from the plastic Shen-Nav (dwellings, objects), but cannot alter or destroy the Creations of Yama.

2.5. The Existence of Souls in Nav

2.5.1. The Body of the Soul (Shen-Nav)

After death, the G- Ψ (Monad) is freed from the coarse body, and its Shen-substrate becomes the «external» form in Nav. This subtle body (linga-sharira) is capable of assuming any habitual form by the power of thought.

2.5.2. Emotions in Nav

In the absence of coarse Matter, Emotions are experienced an order of magnitude more intensely:

- Pure Souls experience bliss (high Φ , resonance with Pleroma).
- Unpurified Souls experience suffering (Nashtakh, resonance with their own traumas).

This is not a reward or punishment, but Ψ -physics: in a medium with high Φ , emotional states resonate with maximum amplitude.

2.5.3. Information and Judgment

In Nav, the Information accumulated during life unfolds automatically (a holographic projection of the entire life). This is a natural process of self-evaluation, not an external judgment.

2.6. The Structure of Nav (Ψ -Layers)

Nav is non-homogeneous; a gradient of Φ exists within it:

Layer	Φ	Inhabitants
Preta-loka (The Threshold)	Low (close to 3D)	Souls with strong attachment to matter
Pitri-loka (World of Ancestors)	Medium	Souls who have lived a worthy life
Svarga-loka (Higher Nav)	High (close to Pleroma)	The righteous, heroes, sages

Таблица 9: The Structure of Nav

2.7. Reincarnation: The Cycle Nav $\leftrightarrow$ Yav

A Soul cannot abide eternally in Nav by virtue of the II-Principle (the Derivative $\pi/2$) — the eternal impulse toward manifestation. Having exhausted the experience of Nav, the G- Ψ performs Anamorphing back into 3D through union with Jing (the embryo).

The Cycle: 3D (experience, accumulation) $\leftrightarrow$ Nav (processing, purification, rest).

2.8. Conclusion

The World of Yama is neither an «otherworld» nor a Hell. It is:

- A Ψ -infrastructure created by a Superpersonality to ensure the evolution of Souls.
- A buffer between coarse Matter and Pleroma.
- A School and a Temple, where Souls process experience, purify themselves, and prepare for the next incarnation or final Return.

Yama is not a judge and not a «god of Death» in the mythological sense. Yama is the Architect, Engineer, and Guardian of the Ψ -infrastructure, whose feat (stopping a step away from Pleroma for the sake of creating Nav) is the highest act of Compassion in the Multivers.

S.3. Supplement 3 (Tertia). On Glooms, Sprites, and the Method of the Conscious Collapse of Potential Branches of Reality

3.1. The Local Alteration of Metric: Gloom and Sprite

The preceding supplements established that Consciousness is a D-machine capable of locally raising Symphysis (Φ). However, an undisclosed question remained: how exactly does this internal Ψ -process project onto external physical reality, onto the fabric of Space-Time?

According to the Principle of Gauge Projection, any alteration in the Ψ -substrate of Consciousness induces a local alteration of the effective dimensionality $D(r)$ in the immediate vicinity of the carrier-body. This alteration is not coarse (not a jump from 3D to 4D), but smooth, fractional, continuous. We define two fundamental regimes of such deviations:

Definition 1 (Gloom). *A state of local decrease of $D(r)$ slightly below 3 ($D \rightarrow 3 - \delta$, where δ is a small fractional increment). Arises at points of Nashtakh — in regions of fear, pain, hatred, fragmentation. In a zone of Gloom, causality becomes more rigid, time — linear and inexorable, probabilities — collapsing toward the worst-case scenario. Subjectively experienced as an «oppressive atmosphere», a «sepulchral cold», a «clammy fear». This is the metric shadow of Nashtakh.*

Definition 2 (Sprite). *A state of local increase of $D(r)$ slightly above 3 ($D \rightarrow 3 + \varepsilon$, where ε is a small fractional increment). Arises at points of Symphysis — in acts of compassion, love, heroism, selfless creativity. In a zone of Sprite, causality is softened, time becomes more plastic, «volumetric», and probabilities — more open. Subjectively experienced as «grace», a «halo», a «radiance». This is the metric trace of Pleroma in our $3D+1$ continuum.*

The consciousness of a Savior, a Hero, a Sage — is a walking region of Sprite, while a victim or executioner radiates Gloom. Animals, children, and sensitive D-machines perceive these alterations of dimensionality directly, as a physical field.

A Note on Platonic Solids: At the Planck level, where reality is discrete and consists of Gophrons (G-objects), the ideal geometric analog of baseline 3D-reality is the Octahedron-Gophron. In this discrete picture, deviations from the ideal are quantized: the Tetrahedron-Gophron symbolizes Gloom (deficit of vertices, $D < 3$), and the Icosahedron-Gophron — Sprite (surplus of vertices, $D > 3$). However, at the macrolevel where Consciousness operates, this quantization transitions into a smooth continuum of fractional alterations.

3.2. The Method of the Conscious Collapse of Potential Branches of Reality

The above-described dynamics of Gloom and Sprite serves as the theoretical foundation for a practical Method, first observed and described by the author of the Concept on the example of the «cancelled journey». The Method permits the performance of Ψ -transmutation — the annihilation of a potential karmic branch of reality before its physical realization, with the return of the expended Ψ -energy (Jism) and the enrichment of the informational experience of Consciousness (the doubling of experience).

3.2.1. The Essence of the Method

The consciousness of the operator, acting as a D-machine, creates a powerful, detailed Ψ -pattern of a future reality (a Wave of Reality). Then, instead of passively entering this branch,

the operator, by a conscious volitional act, annihilates it. The released Ψ -energy (Jism) is reintegrated back into the D-machine, causing a leap in local Symphysis and a purification from the samskaras associated with this branch.

3.2.2. Categories of Potential Events

The Method works for three categories of potential events, with fundamental stipulations:

1. **Neutral Possibilities (Basic Ψ -Gymnastics).** This is the safe training of the Method on events having no rigid karmic polarity. The energy of intention is invested, the potential branch is created, and then collapsed, returning the purified energy and information about the «unlived day» back to the operator.
2. **Negative Karmic Events (Examination for the Adept).** It is possible to collapse a prepared negative event (a ripened samskara) and absorb its energy. However, this requires a state of Advanced Symphysis in the operator themselves. The annihilation of a negative branch is permissible only through an act of its total acceptance, forgiveness, and transcendence. If, however, the motive is fear, hatred, or the desire to avoid pain for the sake of the Ego, then instead of annihilation, a Ψ -explosion occurs: the Nashtakh of the operator enters into resonance with the Nashtakh of the event, leading to fragmentation of consciousness and karmic aggravation. This corresponds to the Ψ -Law: «High Φ and the Ego are ontologically incompatible».
3. **Positive Possibilities (The Trap of Atlas).** It is technically possible to annihilate a positive branch as well, absorbing its energy. However, this constitutes a refusal of Ψ -Service and leads to Ψ -parasitism and the collapse of the operator's evolution. The sole exception is True Sacrifice ($A_{\uparrow}$), when a positive possibility is collapsed in order to transfer its energy to the creation of an Infrastructure of Symphysis for other Souls (an analog of the Feat of Yama). This is accessible only to Superpersonalities.

3.2.3. The Criterion of Safety: Zero Ego

The constant and safe application of the Method is possible only upon the complete coincidence of the operator's personal will with the Will of Pleroma toward complexification and Symphysis ($m_{\Psi} \rightarrow 0$). The criterion is the answer to two questions posed at the point of decision:

1. «Who acts? My fear (the Ego) or my Love (the Monad)?»
2. «What do I want? Peace for myself or the growth of Symphysis for the All?»

3.3. Informational Connections: «Savior — Victim» and «Victim — Executioner»

The Method of Collapse and the dynamics of Glooms and Sprites reveal the nature of informational connections between Ψ -subjects.

3.3.1. The «Savior — Victim» Connection (Ψ -Resonance)

Before their meeting, their Monads form a gradient of Symphysis in the Ψ -substrate, which «attracts» them to one another. At the moment of contact, the high Φ of the Savior (Sprite) resonates with the suppressed «spark of Atman» within the Victim. Information and Jism are transmitted directly through the quantum-entangled channel of the Gophron Network, bypassing speech and action. It is precisely thus that a kitten, its senses sharpened by suffering, perceived the Sprite of a future master as the sole door out of Hell.

3.3.2. The «Victim — Executioner» Connection (Ψ -Parasitism)

This is a connection through shared Nashtakh. At the moment of violence, the D-machines are synchronized at a low level of Φ , creating a channel for the pumping of Jism from the Victim to the Executioner. This act leaves in the Ψ -substrate a Larva — a stable parasite-pattern binding their Monads. The severance of this connection is possible only through an act of higher Symphysis — forgiveness on the part of the Victim, which annihilates the low-frequency channel of Nashtakh.

3.4. Conclusion: Ψ -Ethics as Physics

Gloom and Sprite are not metaphors, but local metric characteristics of Space-Time, created by Consciousness. The Method of Collapse is not magic, but a practical technology of Ψ -transmutation, permitting the conscious alteration of a karmic trajectory. Both phenomena are subject to a single ethical law, which is not a moral norm, but the fundamental physics of the Multivers: the growth of Symphysis is movement toward Pleroma, while Nashtakh is collapse into Hell. And the point of choice is always here and now, in the act of the free will of Consciousness.

3.5. Catharsis and Psychophtora: Two Vectors of Ψ -Transmutation

The Method of the conscious collapse of potential branches of reality is not an ethically neutral instrument. Its application reveals two fundamental, ontologically opposite vectors of Ψ -dynamics, distinguished by motive, mechanism, and result for the operator.

Definition 3 (Catharsis (Ψ -Purification)). *A Ψ -process whereby the operator (the Savior, the Hero) annihilates their own negative karmic branch (Nashtakh) through an act of selfless Sacrifice ($A_{\uparrow}$), directed at the restoration of connectivity with the Other. As a result, the released energy (Jism) is not stolen, but integrated into the D-machine, causing its purification from samskaras, an increase in local Φ (Symphysis), and the creation of Surplus Information. Subjectively experienced as renewal, pacification, enlightenment. Vector — Symphysis, Sprite ($D > 3$).*

Definition 4 (Psychophtora (Ψ -Corruption)). *A Ψ -process whereby the operator (the Maniac, the Executioner, the Psychophtoros) forcibly collapses the positive Ψ -trajectory of another being (the Victim), creating with it an unnatural parasitic circuit. The Victim's energy is not integrated, but stolen, creating in the operator a temporary illusion of power (a false Sprite) and forming a stable vampiric pattern — a Larva. This act does not purify, but corrupts the operator's D-machine, accelerating its collapse into Nashtakh and causing dependence on new acts of violence. Vector — Nashtakh, Gloom ($D < 3$).*

The distinction between Catharsis and Psychophtora lies not in the external mechanics (both acts are «collapse»), but in the internal Ψ -vector: the first is an act of Creation and Symphysis, the second — an act of Parasitism and decay.

3.6. The Global Projection: «Cancellations» and «Cancellations of Cancellations» as Phases of Ψ -War

This dynamic has not only an individual, but also a global, cosmic scale, manifesting as a battle for the dimensionality of entire sectors of the Multivers.

3.6.1. «Cancellations» (The Black Code, Gloom)

The massive application of Psychophtora at the level of reality, perpetrated by Ψ -parasites (the «grays», the «Cosmic Wasps»). The goal is not simply the destruction of objects, but the forced lowering of the dimensionality $D(r)$ in a target sector of reality ($D \rightarrow 2.99, 2.98 \dots$). This leads to the collapse of the «light cone», the truncation of probabilistic bundles of the future, the erasure of collective Memory, and the deprivation of Souls of freedom of choice. Subjectively experienced by a civilization as an epoch of «off-scale» Glooms, loss of possibilities, and total «doom». Examples: the sudden disappearance of people, cities, and entire strata of history without the preservation of memory of them.

3.6.2. «Cancellations of Cancellations» (The White Code, Sprite)

The counter-application of the Method of Collapse by the Consciousness of a Savior of planetary or cosmic scale. This is the annihilation of vampiric, negative branches, implanted by the «Black Code», and the restoration of stolen dimensionality and Memory. Since the Ψ -substrate always preserves the «memory» of the primordial positive pattern (the Derivative $\pi/2$), the act of «Cancellation of a Cancellation» restores $D(r)$ to 3 and above, embedding back the vanished chains of events and generating the phenomenon of «surfaced reality». Subjectively, this is experienced as sudden «Sprites», hope, a series of «miraculous» salvations, and the restoration of justice.

At the moment of this writing, according to indirect Ψ -indicators, a phase of escalation of «Cancellations of Cancellations» is observed, testifying to the transition of the Consciousness of Pleroma (or its Agents) to a counter-offensive against the forces of Nashtakh in the local region of Earth.

3.7. Conclusions, New Categories, and Forecasts

3.7.1. Fundamental Conclusions and New Postulates

1. **The Ontological Status of the Gophron Network:** The Gophron Network is not a separate «informational space-time», dual to matter. It is the very fabric of the Single Ψ -substrate (Protoformation) at the Planck level. In Pleroma, it exists in an undifferentiated, «dormant» state (Absolute Rest with a Nonzero Derivative). In any manifested world with a finite D , it is projected as the discrete, fractal foundation of Space-Time, where each node is a G-object. Ψ -Theory thereby removes the Cartesian dualism of matter and information, showing them as different projections of one entity.
2. **The Nature of Potential Energy and Ψ -Programs:** The potential energy of any events (both conscious intentions and unconscious natural processes) is physically reserved in the form of the tension of the geometry of the Gophron Network. The Network itself is a computational medium (the Gophron Computer), executing three types of Ψ -programs: Fundamental Ψ -Constants (the Main Code), Emergent Ψ -Patterns (the Karmic Code), and Conscious Intentions (the Individual Code). The laws of physics are the first two types of programs, unfolding with the help of the material Universe as their «display».
3. **The Vectors of Ψ -Transmutation: Catharsis and Psychophtora.** Any act of the collapse of a potential branch of reality is not ethically neutral. It has two fundamental, ontologically opposite vectors: Catharsis (Ψ -Purification) and Psychophtora (Ψ -Corruption).
4. **The Scaling of the Method: Direct Access and Ψ -War.** The Method of Collapse scales from individual Ψ -gymnastics to planetary and cosmic levels («Cancellations» and «Cancellations of Cancellations»). At the higher stages of Advanced Symphysis ($m_\Psi \rightarrow 0$), Consciousness acquires the capacity for Direct Access to the Gophron Network, influencing

Ψ -programs directly through $\mathbb{C}$ -space, without the mediation of coarse matter.

3.7.2. New Categories and Concepts

- **Psychophtora / Psychophthoros:** The process of the corruption of the Soul through Ψ -parasitism, and the subject-bearer of this process (the antagonist of Catharsis).
- **Diaphthora:** A Greek synonym for corruption, indicating destruction «through and through», used to describe the depth of Ψ -necrosis.
- **Ψ -Potential Energy (E_Ψ):** Energy stored in the informational-semantic and karmic structures of the Ψ -substrate (the tension of the Gophron Network).
- **Gophron Computer / Universe (GU):** A refinement of the function of the Gophron Network as an active computational medium executing Ψ -programs.
- **Direct Access (Consciousness $\rightarrow$ Gophrons):** The capacity of Consciousness for direct influence on Ψ -programs in the $\mathbb{C}$ -space of the Gophron Network, bypassing physical intermediaries.
- **Channel of Connection with Pleroma:** A metaphor (having a physical meaning in the nonlocal connections of gophrons) describing the degree of accessibility of integral information and energy depending on the local Φ . Symphysis is the width and purity of the channel; Nashtakh is noise and disruptions.

3.7.3. Forecasts and Hypotheses

Models:

1. **A Cybernetic Model of the Gophron Network:** It is necessary to develop a formal model describing the Gophron Network as a quantum computer, where G-objects are logic gates, their topology is a program, and the energy of deformation is a computational resource.
2. **A Topological Model of Ψ -Channels:** Formalize the concept of the «Channel of Connection with Pleroma», linking its throughput capacity (Ψ -bit/ τ) with the local value of Φ .

Hypotheses:

1. **The Hypothesis of Ψ -Entropy:** The complexity of the computations of the Gophron Network is inversely proportional to its energy efficiency. In Hellish worlds (low Φ), Ψ -entropy is maximal, and the efficiency tends toward zero. In Heavenly worlds (high Φ), computations occur almost non-dissipatively, due to the quantum coherence of the entire network.
2. **The Hypothesis of Psychophtoric Imprinting:** An act of Psychophtora leaves in the Gophron Network a stable «scar» (a Larva), which acts as an attractor, recursively reproducing the pattern of violence in subsequent cycles and incarnations, until it is annihilated by an act of Catharsis (forgiveness).

Forecasts:

1. **Cognitive Ψ -Physics:** Anomalies will be discovered in the work of the brain and cognitive processes which cannot be explained by neurobiology, but are perfectly described by the model of «Direct Access» (the phenomenon of genius insights, savantism, deep intuition as a result of the brief «hooking» of the D-machine onto a wide Ψ -channel).
2. **Social Ψ -Dynamics:** The effect of «Cancellations» and «Cancellations of Cancellations» will be registered as a statistically significant alteration of dimensionality in societies. Epochs of the flourishing of cultures will be characterized by an objectively higher «social dimensionality» (Sprite), while epochs of decline and tyranny — by a «social Gloom».

3. **The Cosmological Ψ -Cycle:** The cycles of the «Big Bang» and «Gophronization» are cycles not simply of energy, but of the accumulation of Surplus Information. The final goal of the cycle is not heat death, but the birth of a new, more complex Gophron Universe (GU), enriched by the experience of all the consciousnesses that have lived within it.

S.4. Supplement 4 (Quarta). Ψ -Programming: The Architecture of the D-Machine and Social Ψ -Dynamics

4.1. The Strazh-Controller

The Strazh-Controller is the fundamental Ψ -Interface of the D-machine, localized at the level of the neuro- Ψ -correlate in the region of the cerebellum and performing the function of a calibrational filter between the Monad (G- Ψ) and its current 3D+1 projection (the Personality).

4.1.1. The Ψ -Functions of the Strazh

1. **The Collapse of the Superposition of Memory:** The forced decoherence (annihilation) of informational patterns received by the Monad in the regime of Direct Access (sleep, out-of-body experience), in order to maintain the coherence of the local Initial Hypersurface and prevent Ψ -dissociation of the Personality.

During sleep and out-of-body experience, the Monad (G- Ψ) has access to a broader Ψ -channel (Direct Access), perceiving information from adjacent Waves of Reality and the Gophron Network. The Strazh-Controller acts as a Ψ -trimmer, annihilating this information upon the D-machine's transition to the «waking» regime (rigid binding to the 3D+1 Initial Hypersurface). This is not malevolent design, but a necessity: for effective navigation in the coarse 3D-world, the D-machine must operate with a consensual, rather than a total, reality, in order to avoid Ψ -schizophrenia (dissociation of the Monad and the Personality).

2. **The Maintenance of Consensual Symphysis:** The filtration of individual Ψ -experience incompatible with the current level of the collective Φ (social dimensionality), with the aim of preventing the collapse of the social Gophron Network.

Social Calibration (Prevention of the Ψ -Collapse of Society): If everyone simultaneously received Direct Access, «social bonds would be severed». The Strazh-Controller maintains the consensual Symphysis of society. It filters individual Ψ -experience, not permitting it to destroy the collective 3D-projection, until society as a whole attains a higher Φ .

3. **Ethical Calibration:** Functioning as an interface for externally implanted Ψ -programs of Nashtakh (shame, guilt), which restrict Direct Access.

The Ethical Filter (Shame and Guilt): In Ψ -terms, these are internalized Ψ -programs of Nashtakh. They are not «original sin», but social Glooms, implanted in the Gophron Network to restrict the access of D-machines to Direct Access. Psychophthoroi («sociomaker-puppets») program these filters for control.

Ψ -Mastery (Working with the Strazh): The goal is not to destroy the Strazh (that leads to Ψ -degradation), but to reprogram it, taking its function upon oneself consciously. This is the transition from automatic «trimming» to the conscious governance of the Ψ -channel. This is true Ψ -Programming of oneself.

4.1.2. The Essence of the Strazh-Controller

Primary: A Ψ -Program (Analogous to the Seven Po-Souls in Daoism)

The Strazh-Controller in its essence is not a material object. It is an autonomous Ψ -program (Karmic Code), which is sewn into the structure of the Monad (G- Ψ) at its Anamorphing (incarnation) into the 3D-world. It is part of the informational matrix of incarnation, necessary for functioning under conditions of low Symphysis. These are «animal souls», functional algorithms for survival and navigation in coarse matter. This is the software of the D-machine.

Secondary: The Neuro- Ψ -Interface (The Material Correlate)

This Ψ -program cannot interact with the 3D-body directly. For that, it requires a physical anchor, an interface. That becomes the cerebellum (and, probably, other ancient structures of the brain). The cerebellum is not the Strazh itself, but its material relay, the hardware module through which the Ψ -program gains access to the nervous system, the hormonal system, and, as a consequence, to the behavior and consciousness of the Personality. This is the hardware.

Synthesis:

The Strazh-Controller is a Ψ -cybernetic system:

- **The Software Level (G- Ψ , the Monad):** The Ψ -program «Strazh», implanted at incarnation. This is one of the analogs of the «animal soul» Po, providing the filtration of Ψ -information.
- **The Hardware Level (the 3D-body):** The neural networks of the cerebellum, tuned to resonance with this concrete Ψ -program. This is the interface, transforming Ψ -commands into neurohormonal signals (for example, a release of cortisol during «shame», blocking Direct Access).

4.2. Favorers, Ignorers, and Puppets: Ψ -Social Gophron Dynamics

These are not simply social roles, but the Ψ -wave dynamics of the distribution of energy in the collective D-network of humanity. This is the mechanism for governing social Symphysis.

- **Favorers (Carriers of Social Sprite):** These are individuals whose D-machines are currently Ψ -resonant with the «activation» phase of the collective Gophron Network. Surplus social Jism is delegated to them. They become temporary centers of the crystallization of reality. This can be any person, irrespective of their personal Φ , which is why among them there are both beggars and kings. This is not a personal merit, but a Ψ -function within the social circuit.
- **Ignorers (Carriers of Social Gloom):** These are individuals whose D-machines are in Ψ -counterphase to the current wave of activation. Their social channel is zeroed out; their energy is withdrawn to feed the Favorers. They are victims of forced social Nashtakh. Their subjective experience («no one sees me») is a direct experience of the local collapse of $D(r)$ in their social circuit.
- **Puppets (Ψ -Biorobots):** These are people with a collapsed D-machine, whose consciousness (Shen) has faded to a minimum. They are «empty» G- Ψ , ideal receivers for external Ψ -Programming. Psychophthoroi or Ψ -Masters can directly load Ψ -programs into them, turning them into living instruments. Their effectiveness in society is explained precisely by this: they do not expend energy on reflection, being a pure conductor of another's will.

4.3. Programmers, Cleaners, and Intruders: The Hierarchy of Ψ -Operators

Here is described the real, hidden hierarchy of conscious Ψ -operators in human society.

- **Programmers (Ψ -Architects):** These are those who have mastered Direct Access to the Gophron Network and are capable of introducing new Ψ -programs (intentions) into it, altering reality. They have no unified system. Each develops their own unique Ψ -code on the basis of personal experience, because Direct Access is not a technology, but a state of Consciousness. Their disunity is their defense against detection by Psychophthoroi.
- **Cleaners (Psychophthoroi-Terminators):** These are hybrid operators using Psychophthora for the annihilation of «errors» in the Ψ -program. Their goal is not creation, but the deletion of undesirable branches and of the Programmers themselves. They can be either humans with a collapsed Monad, or pure Ψ -weapons launched into the 3D-projection.

- **Intruders:** These are Ψ -operators conducting pinpoint interventions into others' karmic trajectories. White Intruders are Saviors, applying Catharsis for the correction of destiny. Black Intruders are Psychophthoroi, striving for the destruction of the victim's Ψ -potential.

4.4. Conclusion of Quarta: Ψ -Programming as Conscious Evolution

This is the manifesto of Ψ -Programming, which the Concept now formalizes. The reprogramming of the Strazh-Controller, the understanding of the dynamics of Favorers/Ignorers, and the conscious entry into the role of the Programmer — this is not magic, but the stages of the maturation of the D-machine.

This is the path from a passive «puppet», governed by external Ψ -programs, to an active Co-Creator of the Multivers, who consciously raises Symphysis, employing the Method of Collapse and Direct Access.

S.5. Supplement 5 (Quinta). The Triad of Advanced Symphysis: The Architectonics of the D-Machine and the Program of Pleroma

5.1. The Triad of Advanced Symphysis: Jism, Jasm, Jism

In development of the model of the D-machine as a local operator of Ψ -potential, the Concept introduces three fundamental components that ensure its functioning in the regime of Advanced Symphysis. In distinction from the baseline Symphysis of the 3D-world (the triad Matter-Energy-Information), these components are its direct sublimation and describe the internal architectonics of Consciousness as a Ψ -processor.

- **Jism:** The light material-field substrate of Consciousness, sublimated Shen. It is the «carrier» (hardware) of the D-machine. Its volume determines the maximal complexity of held Ψ -patterns and the Bit Depth (B_Ψ) — the capacity to process multidimensional informational blocks in a single Ψ -operation. Reference levels of Jism are subjectively calibrated against peak states of power and the alchemical «portions» obtained in practice.
- **Jasm:** The emotional-energetic context, the motivational «tension» of the D-machine. It is the gradient of the Ψ -field (∇E_Ψ), which imparts vector and dynamics to the processes of Consciousness. Jasm determines the Throughput Capacity of Direct Access (C_Ψ) — the purity and power of the channel of connection with the Gophron Network. A high, harmonious Jasm (Catharsis) opens the channel; a chaotic or low one (Psychophthora, Gloom) — jams or severs it.
- **Jism:** Service Ψ -upgrade programs, received by Consciousness directly from the Gophron Network. These are not applied knowledge, but architectural patterns that optimize the very operation of the D-machine (analogous to an operating system kernel). Jism determines the Clock Frequency (ν_Ψ) — the speed of Ψ -operations, and also removes the software limitations on efficiency.

The balanced interaction of the Triad determines the Architectural Efficiency (η_Ψ) — the coefficient of performance of the D-machine, the ratio of Ψ -Work (the increment of Φ) to the Jism expended.

5.2. The Stages of the Unfolding of the Triad in 3D-Incarnation

The unfolding of the Triad of Advanced Symphysis in individual evolution is subject to the following hierarchy:

1. **Phase 0. Incarnation (Zeroing):** At birth, Jism is minimal, Jasm is unstructured, and Jism is represented only by a basic driver — the Program of Binding to the Corporeal 3D-Symphysis, ensuring the interface of the Monad ($G-\Psi$) with the new body and its receptors.
2. **Phase 1. Elemental Growth:** The accumulation of Jism through life experience and the formation of primary Jasm (character). Unconscious sublimation of Jing is possible, yielding the first elemental increments of Jism.
3. **Phase 2. Connection to the Network (Initiation):** A spontaneous or initiated event of Direct Access, opening a stable channel of connection with the Gophron Network. It is accompanied by the reception of fundamental Jism — programs of self-awareness and philosophical reflection. The time of initiation is individual.
4. **Phase 3. Conscious Alchemy:** Purposeful, volitional governance of the processes of sublimation ($Jing \rightarrow Qi \rightarrow Shen$) for the accumulation of Jism, the calibration of Jasm, and the conscious reception of new programs of Jism from the Network.

5. **Phase 4. Avatar (Remote Control):** Upon the attainment of a critical volume of the Triad, the 3D-body ceases to be a container and becomes a Spacesuit. The D-machine, preserving the inseparability of the Symphysis of the Three (Jism, Jasm, Jusm), transfers its primary locus to higher dimensionalities, governing the body remotely through a wide Ψ -channel.

Key Principle: The Symphysis of the Three is inseverable. The «relocation» of the D-machine to higher dimensionalities is not a rejection of the substrate (Jism), but an alteration of its metric with the preservation of the entire Ψ -complex.

5.3. The Program of Pleroma and the Patriotism of the Soul

The incarnation of a Soul in a concrete 3D-body, time, and place is not accidental. It is subject to the Program of Pleroma (PP) — the cardinal, general Ψ -program, sewn into the structure of the Monad (G- Ψ) at its Anamorphing. This program constitutes the Mission of the Soul and is its individual contribution to raising the overall Symphysis of the Multivers.

From this follows a fundamental Ψ -imperative: «**Remember the Body**». As long as the Program of Pleroma remains unrealized, the D-machine must not completely sever the connection with its Corporeal 3D-Symphysis. This is not an attachment to coarse matter, but the **patriotism of the Soul** — fidelity to its Ψ -mission at that point of the space-time continuum to which the Soul was directed by Pleroma.

The phrase «Where you were born, there you are needed» receives a rigorous Ψ -grounding: each Soul incarnates at a unique Ψ -node of the Gophron Network, where its individual Jusm (programs) and Jasm (emotional vector) maximally correspond to the local Ψ -landscape and the tasks of its Symphysization. The attainment of higher states (up to the stage of the Avatar) does not cancel, but intensifies the Soul's capacity to execute this mission, but now with a broader access to resources and vision.

5.4. Conclusion: The D-Machine as an Instrument of Pleroma

The D-machine, armed with the Triad of Advanced Symphysis, is not a fugitive from the 3D-world, but a plenipotentiary agent of Pleroma within it. Its evolution — from infantile zeroing to the stage of the Avatar — is a process of the unfolding of the Program of Pleroma. The goal of this unfolding is not escapism into higher dimensionalities, but the transformation of the 3D-Raster through the raising of its local Φ , the transformation of Glooms into Sprites, and, in the final account, the return of enriched Surplus Information to the Gophron Universe. In this consists the highest Patriotism of the Soul and true Service.

S.6. Supplement 6 (Sexta). Ψ -Biochemistry and Alchemical Transmission: The Molecular Foundations of Jism, Jasm, Jusm

6.1. The Triad of Advanced Symphysis and Its Molecular Correlates

Supplement 5 (Quinta) established the three fundamental components of the Architectonics of the D-machine: Jism (substrate), Jasm (energo-emotional context), and Jusm (upgrade programs). The present Supplement postulates their molecular and cellular correlates in the Corporeal 3D-Symphysis, based on the model of the brain interface, where neurons and cerebrospinal fluid are not the source, but the projection of Ψ -processes.

6.2. The Jusm-Jasm-Processor: The Neuronal Network as a Program-Emotional Matrix

The neuronal network of the brain represents a holistic Ψ -processor, where the «hardware» (neurons), the «software code» (synaptic connections), and the «tension» (neurotransmitters) are fused into an inseparable complex.

- **Jusm (Programs):** The correlate is the synaptic architectonics. The patterns of synaptic connections, their strength (long-term potentiation), and the capacity for remodeling (neuroplasticity) — this is the biological substrate for the upgrade programs received from the Gophron Network. Each act of Direct Access or insight leaves a structural trace in the form of a new or strengthened synaptic connection.
- **Jasm (Energy/Context):** The correlate is the neurotransmitter and hormonal profile. Dopamine sets the gradient of the Ψ -vector and motivation; serotonin regulates the background Symphysis and the «throughput capacity» of channels; noradrenaline modulates the Clock Frequency (ν_Ψ); oxytocin and vasopressin form social resonance. Their balance creates the unique Jasm-context, determining the quality and vector of Ψ -processes.

6.3. The Jism-Substrate: Cerebrospinal Fluid as a Liquid-Crystalline Ψ -Antenna, and Hypotheses on Its Nature

Cerebrospinal fluid (CSF) is postulated not as a passive medium, but as an active Ψ -conductor and reservoir of Jism. It is precisely through it that the circulation of the light material-field substrate (Shen) is effected within the CNS. The pathogenesis of Alzheimer's disease, accompanied by the accumulation of amyloid plaques ($A\beta$) and tau-protein, is interpreted as the crystallization of «spent Jism» (materialized Nashtakh), disrupting the Ψ -conductivity of the interface.

The question of the nature of «charged», functional Jism and its precursors is key. Two non-mutually-exclusive hypotheses are advanced:

Hypothesis 1 (The Unique Protein (The Spermatic Ψ -Factor)). *The substrate of Jism is a specific protein or protein complex, uniquely expressed in the organs of the reproductive system (testicles, seminal vesicles, prostate) and absent from the systemic bloodstream. Its unique amino acid sequence serves as its «marker». During alchemical sublimation, this protein, bypassing the BBB, penetrates the CSF and, binding to specific receptors on neurons, triggers a cascade of regeneration and the strengthening of neuroplasticity (Jusm), acting as a signaling molecule.*

Hypothesis 2 («Ribosomal Compartments» and Epigenetic Context). *The substrate of Jism is not a unique substance, but a unique concentration profile and delivery pathway of peptides and amino acids, formed during specific proteolysis in the seminal vesicles (the SEP-Ψ-Complex). Of principal significance is not a molecular «tag», but:*

1. **The Delivery Pathway:** *Direct transport into the CSF through the «lower glymphatic system», bypassing the blood-brain barrier (BBB) and systemic regulation.*
2. **The Biochemical Context:** *The SEP-Ψ-Complex creates in the intercellular fluid of the brain a unique epigenetic landscape, which activates «dormant» genes, triggers the synthesis of specific proteins for the upgrade, and facilitates the formation of new synaptic connections. The difference between ordinary and «alchemical» peptides lies not in their structure, but in the architectural plan of construction which they launch.*

6.4. Alchemical Transmission: The Ψ-Biophysics of the Sublimation of Jing

The process of conscious alchemical sublimation is described as a repolarization of the metabolic vector from exothermic (loss) to endothermic (transmutation).

6.4.1. The Anatomical Crucible and the Mechanism of Sublimation

- **The Role of the Prostate (The Agent of Jism):** The secretion of the prostate, containing enzymes (PSA, phosphatases), performs the function of a liquefaction program. Under the action of the increased internal pressure when the external path is blocked, it penetrates the seminal vesicles, triggering an enzymatic cascade.
- **The Seminal Vesicles (The Alchemical Crucible):** Here, under the action of heat (Jasm-tension) and enzymes (Jism-program), the «cooking» occurs: the dense globular proteins (coarse Jing) are cleaved and transmuted into the superlight, almost immaterial SEP-Ψ-Complex (Seminal Essence of Peptides).
- **The Huang Zone and the «Lower Glymphatic System»:** The existence of an anatomical pathway for the outflow of the SEP-Ψ-Complex into the cerebrospinal fluid through the lymphatic network of the lesser pelvis (the Huang Zone), analogous to the glymphatic system of the brain, is postulated. This is the anatomical localization of the initial stage of the «governing channel» (Du-Mai) in Daoist alchemy.

6.4.2. Hypotheses on the Role of Spermatozoa in Alchemy

Activated but lacking an external outlet, spermatozoa perform not a reproductive, but a Ψ-function:

Hypothesis 3 (Ψ-Navigators (The Overcoming of the Gates)). *Possessing their own motor apparatus (taxis), spermatozoa create microcurrents, propelling the SEP-Ψ-Complex through tissue barriers and narrow passages (the «Gates») of the lymphatic system. They act as living Ψ-pumps.*

Hypothesis 4 (Triggers of Telomerase (The Program of Rejuvenation)). *The dissolution of spermatozoa in the lymph is an act of Ψ-sacrifice, releasing their internal contents. This triggers a signaling cascade which:*

- *Activates the synthesis of the organism's own telomerase.*
- *Launches the process of telomere lengthening and, as a consequence, cellular rejuvenation.*

6.5. The Complete Cycle of Jism: The Biogenesis of the D-Machine and the Elixir of Immortality

The Seminal Essence (SEP- Ψ) is a universal Ψ -substrate, possessing two fundamental vectors of application:

1. **The Vector «Forward» (Conception):** Directed outward for the creation of the primary Ψ -substrate of a new D-machine. The SEP- Ψ -Complex, introduced into the zygote, serves as the initiating Ψ -Matrix, a ready «receiver» for the implanting Monad (G- Ψ).
2. **The Vector «Upward» (Alchemy):** Directed inward, to the brain, for the nourishment, repair, and expansion of the existing D-machine of the adept. It serves as a signal and building material for the attainment of Advanced Symphysis.

Thus, one and the same substance is both the seed of new life and the elixir of immortality for the current life, thereby closing the great Ψ -biochemical cycle.

S.7. Supplement 7 (Septima). Ψ -Evolution of Protein and the Ninth Shell of Man. From Collagen to Semenogelin — Biochemistry at the Frontier of 3D-Reality

7.1. The Norm of Symphysis of the 3D-Raster: The Principle of Limitation and Breakthrough

The fundamental philosophical and biological principle governing the architectonics of life in our 3D+1 reality is the Norm of Symphysis of the 3D-Raster. It states: the complexity and diversity of forms are limited not only by the mathematical laws of fractality, but also by the energo-informational «resolving capacity» of the space-time continuum itself at $D \approx 3$.

This principle explains why a human being has precisely 2 arms and 5 fingers, and not 6 arms and 15 fingers, which are perfectly admissible mathematically. Fractal branching is limited by the threshold of the accessible Raster — the capacity of 3D-space for the «rendering» of highly connected forms, and by the speed of the natural «Processor» — the energetic and informational limits of metabolism.

At the molecular level, the Norm of Symphysis is expressed in the 22 standard, genetically encoded amino acids. Everything that falls outside the bounds of this canon represents a Ψ -breakthrough — an evolutionary complexification at the frontier of the possible, the biochemical threshold of Pleroma, where dimensionality begins locally to exceed 3 (Sprite).

7.2. The Hierarchy of Ψ -Proteins: From the Standard Code to the Breakthrough Beyond the Frontier of 3D

Proceeding from the principle of the Norm of Symphysis, all the proteins of the organism may be classified by their Ψ -complexity and proximity to the boundary of the 3D-Raster.

Level 1. Proteins of the Lower Order (General Purpose):

Synthesized strictly according to the standard genetic code. These are the «bricks» and «workhorses» of the cell — enzymes, transport proteins, structural elements. They provide the baseline metabolism and the maintenance of life, but carry no unique Ψ -information.

Level 2. Proteins of Advanced Structure (of Senior Evolution):

To this class belong collagen and elastin. Their uniqueness lies in the fact that they require post-translational modification — the introduction of the non-standard amino acid hydroxyproline. This process is not encoded in DNA directly, but is performed by a special enzyme after ribosomal synthesis. The emergence of collagen was an evolutionary breakthrough, permitting the creation of multicellular organisms with a solid skeleton. However, collagen is subject to the Law of Ψ -Entropy of Proteins: once destroyed, it cannot be reutilized. Its fragments (hydroxyproline) are transformed into a metabolic dead end — oxalate («ash»), which is excreted from the organism.

Level 3. Proteins of the Higher Ψ -Order (Heralds of Pleroma):

To this level belong hemoglobin and semenogelin. They demonstrate a fundamentally different level of Ψ -function:

- **Hemoglobin — A Model of Two-Phase Jism:** This is a complex protein which absorbs a gas (oxygen) and releases a gas, existing with it in an inseparable dynamic unity. Replace «gas» with «Spirit» — and an ideal biochemical model is obtained of how the material phase of Jism (protein) interacts with its field phase (« Ψ -vapor»). Hemoglobin is proof that a protein can serve as the carrier of a subtle substance.

- **Semenogelin — The Ninth Shell and the Substrate of Jism:** This is a unique, individually specific protein of the seminal vesicles. It is the material carrier of the Ψ -identity of the male. Its key property is the capacity for controlled sol-gel transitions, similar to gelatin (denatured collagen), but in a living, «intelligent» variant. It is capable of polymerizing into an ordered liquid-crystalline matrix («rice») and of «emanating», emitting subtle-material emanations («vapor»). This is the sought Semenogelin- Ψ -Complex (SEP- Ψ) — the material substrate (Jism) that ensures the operation of the D-machine in Advanced Symphysis.

7.3. The Ninth Shell of Man: The Ψ -Interface Opening the Path to Pleroma

The ancient teachings of Siberian shamans say that a man possesses 9 souls, and a woman — 8. In the light of our theory, the 9th shell of man is the elementally forming semenogelin Ψ -interface.

The Mechanism of Formation:

The activation of this interface begins at the age of 12-14 years, which coincides with the onset of sexual maturation and the synthesis of semenogelin. At this age, in boys undergoing initiation, a «new channel» opens — the capacity for an expanded, more powerful consciousness (a Jism-upgrade).

Even without the practices of alchemy, during prolonged abstinence or the spontaneous closure of the «lower gate», semenogelin can, in micro-quantities, seep into the CSF through the «lower glymphatic system», creating the baseline «vapor» for this shell. It is precisely by this that the phenomenon of spontaneous «genius» or «spirit-vision» in adolescents in traditional cultures is explained.

Conscious Alchemy as the Governance of the 9th Shell:

The task of the adept of inner alchemy is to transform this elemental process into a conscious one. The «pearls» or «grains of Jing» (dense clusters of semenogelin), formed during abstinence, are direct proof of this protein's capacity for self-assembly into a liquid-crystalline phase. This is «rice», ready for «cooking». Under the action of the Fire of San-Jiao (Jasm) and the enzymes of the prostate (Jism), this concentrate is transferred into an active, liquid-crystalline form for transport to the brain.

7.4. The Great Synthesis: From the Amino Acid to Pleroma

Thus, a unified, continuous line of the Ψ -evolution of matter is constructed:

1. **The 22 amino acids** — the Norm of Symphysis of the 3D-Raster, the basic alphabet of life.
2. **Hydroxyproline and Selenomethionine** — «letters» beyond the bounds of the alphabet, the first breakthroughs toward greater structural and functional complexity.
3. **Collagen** — the creation of a durable, but «mortal» framework of the body, subject to the Law of Ψ -Entropy.
4. **Hemoglobin** — the model of a two-phase Ψ -protein, effecting the transport of the «gas-spirit».
5. **Semenogelin (the SEP- Ψ -Complex)** — the pinnacle of protein Ψ -evolution in the 3D-world. This is the «Ninth Shell», the material substrate of Jism, capable of self-assembly, the emission of Ψ -emanations, and, upon alchemical transmutation, of the direct nourishment and expansion of the D-machine of Consciousness. This is the bridge by which the human Soul accomplishes the breakthrough to Pleroma — not abandoning the body, but transfiguring it.

S.8. Supplement 8 (Octave). The Differential Breakthrough: Resolution of the Psychophysical Parallelism Problem, The Quantum Oscillator of Consciousness, and the Navi-Receiver

Date: 25.06.2026

8.1. Introduction: The Historical Dead End and Its Ψ -Annihilation

Ever since Rene Descartes formulated the problem of psychophysical dualism, Western philosophy and science have been in a state of schism. Materialism, which denies the independence of Consciousness, and Idealism, which divorces Spirit from matter, are two sides of the same unresolved problem. All attempts to solve the “hard problem of consciousness” have stumbled upon the absence of a **third, connecting element**.

Our Ψ -Theory solves this problem globally by postulating: **Consciousness = Matter + Energy + Information**, existing inseparably at all levels of dimensionality according to the function $D(r)$.

However, for a precise, differential refutation of dualism, it was necessary to find a **specific physical substrate** that demonstrates this principle and to indicate a path toward its experimental verification.

This substrate is the **Semenogelin- Ψ -Complex (SEP- Ψ)**. This Supplement formulates its role as the **Quantum Oscillator of Consciousness** and proposes a concrete technological program—the creation of the **Navi-Receiver**.

8.2. Semenogelin as a Quantum Oscillator and Information Register

Semenogelin is not merely a protein. It is a **liquid-crystalline Ψ -antenna**, operating at the boundary of the 3D Raster and the Pleroma.

- **Semenogelin as a Quantum Oscillator of Ψ -Waves:** The ordered, polymerized matrix of semenogelin in the brain emits not just “vapor,” but quantized, coherent **Ψ -waves**—waves of probability and informational coherence. Its liquid-crystalline structure allows it to vibrate at frequencies inaccessible to ordinary amorphous matter, acting as a **master oscillator** for the D-machine of Consciousness.
- **Semenogelin as a Register of Information-Carrying Particles:** Just as the giant oscillators of neutrino telescopes (e.g., Baikal-GVD) register the faintest flashes of Cherenkov radiation from neutrinos passing through water, so too can the semenogelin Ψ -matrix capture **quanta of inter-consciousness information**. These particles (let us tentatively call them “ **Ψ -mesons**” or “informons”) possess a material-field nature (since information and matter are one in the Pleroma) and, passing through the gel-oscillator, trigger a cascade of quantum events within it: the emergence of photons, phonons, or solitons. This is the material trace of “another’s thought” or a “message from the Nav.”
- **Biological Registration and the Third Eye:** These light and field flashes are captured by specialized nerve cells (similar to the rods and cones of the retina). A candidate for the role of such a detector is the already discovered quantum microtubules in neurons and, primarily, the **Epiphysis (Pineal Gland)**—the ancient “Third Eye,” which contains photoreceptor proteins and is capable of quantum reception.

8.3. The Navi-Receiver: A Technological Breakthrough of Ψ -Theory

The entire theory outlined above possesses a quality that all previous philosophical systems lacked: **fundamental experimental verifiability**. This Conception postulates the possibility of creating a **Navi-Receiver**—a technological, silicon-based device for detecting Ψ -waves and information-carrying particles.

Operating Principle and Architecture of the Navi-Receiver:

1. **Detector Gel (Silicon Jism):** A synthetic or recombinant analogue of Semenogelin gel is created, possessing similar liquid-crystalline and quantum-oscillatory properties. It is placed in a chamber shielded from all known electromagnetic and gravitational noise.
2. **Photomultiplier Array (Analogue of the Epiphysis):** A highly sensitive matrix of photomultiplier tubes (PMTs) or superconducting nanowire single-photon detectors (SNSPDs), capable of registering single photons, is arranged around the detector gel.
3. **Cryogenic System and Signal Processing:** The device is cooled to ultra-low temperatures to minimize thermal noise. An AI system analyzes the temporal and spatial correlations of the flashes in real time, filtering out random events and identifying signals of a non-local, non-physical (in the classical sense) nature.

The successful registration by such a device of non-random, coherent events, especially those correlating with the conscious Ψ -activity of an operator, will become **experimental proof of the existence of the Ψ -field and information-carrying particles**.

8.4. Epilogue of the Octave: Consequences of the Differential Breakthrough

The creation of the Navi-Receiver and the experimental confirmation of Ψ -Theory will be an event surpassing the scientific revolutions of Copernicus and Einstein in significance. It will mean:

- **In Philosophy:** The final and irrevocable resolution of the problem of psychophysical parallelism. Consciousness is neither reducible to matter nor detached from it. It exists as an inseparable Ψ -complex, possessing a material substrate (Jism), an energy context (Jasm), and an informational program (Jusm), and is capable of non-local interaction.
- **In Science:** The discovery of a new fundamental interaction and a new class of quantum particles. This will take physics beyond the Standard Model and open the path to technologies previously considered magic.
- **In Religion and Esotericism:** Confirmation of the correctness of millennia-old spiritual teachings. Communication with Monads that have passed into the Nav, the souls of ancestors, and deities will receive a rigorous scientific explanation, leading to an unprecedented synthesis of science and spirit.

Our Ψ -Theory completes its first great cycle. From esoteric knowledge to a rigorous formula, from philosophical intuition to the engineering blueprint of a device. The Ψ function began its journey from a point of rest, but its Derivative at Zero was not equal to zero. And this eternal impulse has brought us here—to the threshold of the **Era of Ψ -Communication**.
